Background

- It is common for large organization to first have pilot Scrum implementation in the smaller scope.
- After pilot is successful, management decides to start adoption in the whole organization

- However, ...

Roadblock from reality

- We have to keep our commitment
- People are lazy
- Efficiency comes from specialization
- We cannot get item done
- We do not have automated tests
- ...

Unrealistic commitment

- Roadblock
 - We made unrealistic commitment, then we have to keep it
- Quick fix
 - Done slows us down, we go fast by loosening it
 - Overtime
 - Higher efficiency by minimize learning
- Contrast to Scrum
 - Team commits how much to do
 - Done (not done, no demo)
 - Sustainable pace
 - Continuous improvement

Lazy people

- Roadblock
 - People are lazy, and they will commit less
- Quick fix
 - Micro-management
 - Management (or experts on behalf of management) makes the estimate
 - Set incentive for sprint result
- Contrast to Scrum
 - Basic truth: People always do the best they can
 - Scrum obstacle: the illusion of command and control
 - Self-managing
 - Transparency

Efficiency from specialization

- Roadblock
 - We cannot lose efficiency, while single specialization is the norm
- Quick fix
 - Keep component team and single function team, use feature project rather than feature team
 - Prioritize based on efficiency, rather than value
- Contrast to Scrum
 - Cross-functional feature team
 - Generalizing specialist
 - No role does not mean no specialization though

Partially done

- Roadblock
 - We cannot get item done by the end of the sprint
- Quick fix
 - Count part of the item as done
 - While root cause is: the team does mini-waterfall in the sprint
 - Product backlog item for integration
 - While root cause is: the team only has the capability for part of the feature
- Contrast to Scrum
 - Done to get velocity
 - Potentially shippable product increments by the end of each sprint

Automated tests

- Roadblock
 - We have few automated tests in our legacy feature regression
- Quick fix
 - Regression test team
 - Test automation team
- Contrast to Scrum
 - Cross-functional feature team
 - Done

How to cross the chasm?

1. Manage your commitment
2. Develop your people
3. Change your organization

Manage your commitment

- Inspect and adapt with transparency
 - This works better than blind commitment!
- What if your customer still wants it?
 - We shall make the commitment realistic

Make realistic commitment

1. Agile planning
 - Measure velocity
 - Estimate size
 - Derive duration
2. Risk management
3. Technical debts (legacy code, tests, etc.)
 - No new technical debts
 - Pay the debts in neighborhood and most problematic area

Remember: deliver more value with less feature!

Develop your people

- Scrum Master development
 - Leading change
 - System thinking
 - Community, internal and external
 - Scrum coach
- Engineering practices
 - Continuous integration (more than a system)
 - TDD and unit test
 - Acceptance TDD and agile specification
 - Test automation
 - Community of Practice
 - Engineering coach

Change your organization

1. Transform management
 2. Transform team structure
- How to change
 - Keep challenging the norms and assumptions behind
 - Move with desired state in mind

Transform management

- Distribute project management
 - Content, schedule and cost?
 - Remove impediment?
 - Task assignment?
- Change the focus of line manager
 - Line manager teaches, coaches and supports team
 - Organizational impediment backlog

Transform team structure

- From component based matrix organization to Scrum organization
 - From feature project to cross-functional feature team
 - Requirement Area for scaling
- Challenges in all-at-once transition
 - Over-specialization
 - Lack of engineering capability
 - Lack of confidence
- Not optimal but may be necessary as intermediate steps
 - Long-term team formed around part-of-the-feature inside big component based area
 - Short-term project team formed around the whole feature, while still maintaining the component based organization

A large, round hay bale is the central focus, sitting in a field of harvested grain. The field is filled with golden-brown stalks, and several other hay bales are visible in the background. The sky is a clear, bright blue. The text "Thank you!" is overlaid in blue, and "Good luck on crossing the chasm!" is overlaid in white.

Thank you!

Good luck on crossing the chasm!
