ABOUT AUTHOR

My first name is Tuthanh (pronounced as two-thank) and my last name is Le. I am the founder of Symphony Themes, a premium Drupal theme provider. Working on a small business company, I usually take different roles but mostly as a product manager and a marketing specialist.

I am not a Drupal developer. Admittedly, I can not write a single piece of code. I do not intend to learn coding either. That's why I will be a Drupal beginner forever. Fortunately, I am backed up by my experienced developers.

The fun part of being a beginner is that, I refuse to absorb any advanced technical knowledge. When my developers try to teach me something which are too technical, I say NO. After I successfully learn a new stuff from them, I usually rewrite it so I can teach my customers. They are all beginners like me so I need to make it easy enough for them to understand.

I chose Drupal as my business platform since I started my company. I love to help beginners and small business owners to explore the greatness of Drupal, like I have built my online business with it.

In my personal life, I have a lovely wife and we are expecting our first child at the end of this 2012.

You can visit my blog at <http://tuthanh.com> or my Twitter [@tuthanhle](https://twitter.com/tuthanhle).

INTRODUCTION

We have a lot of Drupal books for users and developers, from beginners to experts.

What this book makes the difference is that

It is written for Drupal beginners and written BY a Drupal beginner

Being a beginner, I know what all beginners fear. Just like I first learnt ball room dancing, it took me almost 2 months to move like a robot, to struggle with music rythm and sway at the same time. I had to overcome the temptation of quitting several times before I could actually progress and enjoy the dances. Some of my friends, unfortunately, took the quick path to just give it up. In ball room dancing, the entry barrier was high enough to knock out a majority of beginners who had been earilier very eager to learn a new thing.

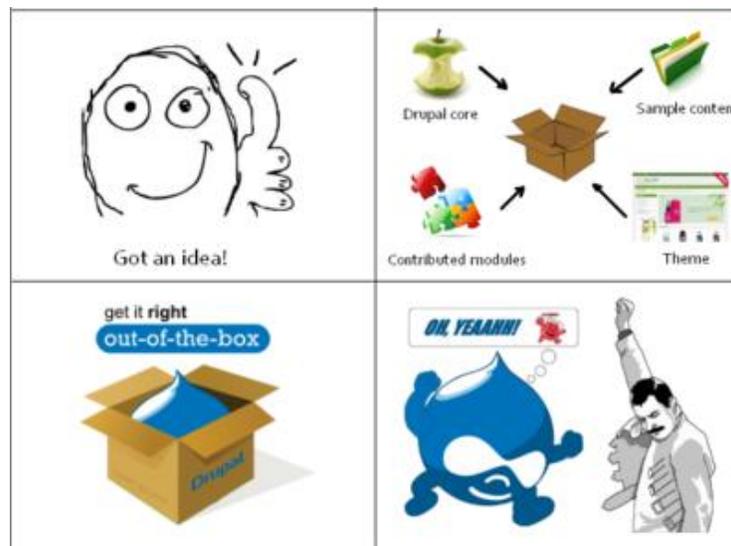

Drupal is similar, it is known as an exclusive playground of developers because of its high learning curve. The first time I had a try with Drupal, I had to struggle with installing it a few hours to get pretty much a blank site. Then what is next? No clue. I wanted to bang my head to walls.

We make it easier for beginners

I told my technical team: “Guys, I am dead with this stuff. Can you just make it easier for me? Can I do it in less than a day?”

I am not a developer, I can not write a single piece of PHP code. I just know some basic hosting and HTML knowledge. And I asked my team to get me to build a completed Drupal site in a day. Sounds a mission impossible?

But we were very interested in this idea. We set a target, within **7 hours** a newbie should be able to master Drupal. Why number 7? Because it is less than eight, a normal workday. We want every newbie can master a Drupal site in 7 hours and spend the last hour of the day to enjoy the first success.

Instead of writing a 300 page handbook so it looks thick enough, we want to give you this 90 page cookbook. First, it will look so much more encouraging when you start to read. Second, we want you to follow steps by steps and finish with an actual product that you can be proud of.

We cut all craps which are just to make up the number of pages. We removed any technical languages that may confuse. We tested and revised with our junior staffs and our customers. We put ourselves in your shoes to write tutorials that can bring most benefits.

Since I never develop myself to a Drupal developer (my primary job is online marketing), I always keep my mind as a Drupal novice and reject any difficult technical stuffs. So I believe that this guide will be easy for all Drupal beginners, as it is written by a beginner.

Again thanks a lot, this the first day on Drupal when I do not bounce my head against the table desk screaming nooooooooooooo.

Who this book is for?

Maybe you are a business owner who wants to quickly build a Drupal site for your business. Maybe you are a Drupal novice struggling with learning Drupal. Do not worry, you can master a Drupal site in less than a working day using this book and other packages provided.

What this tutorial cover?

Hour 1: Installation, explains how to set up a Drupal site from our out-of-the-box packages. It comes with the wizard, so you can setup the site by just clicks.

Hour 2: Basic customization, covers all steps to upload your own content to the site. After that, you can launch it to public.

Hour 3: SEO, explores some basic rules before doing SEO and then Drupal SEO techniques.

Hour 4: Daily content management, gives you some best practice methods to keep producing content to your website.

Hour 5: Technical administration, shows how to keep your site healthy by status checking, backup, updating modules and cores.

“ This is actually the first tutorial that gives me the overview I as a beginner wanted.”

Hour 6+7: Advanced customization, presents more advanced techniques if you want to further customize the site.

After finishing 7 hours of learning, you will achieve:

- Have a running Drupal site of your own
- Understand how to administrate a Drupal site
- Operate your Drupal site running smoothly with ease
- Establish a solid background to explore more features provided by Drupal.

Download the example code for this book

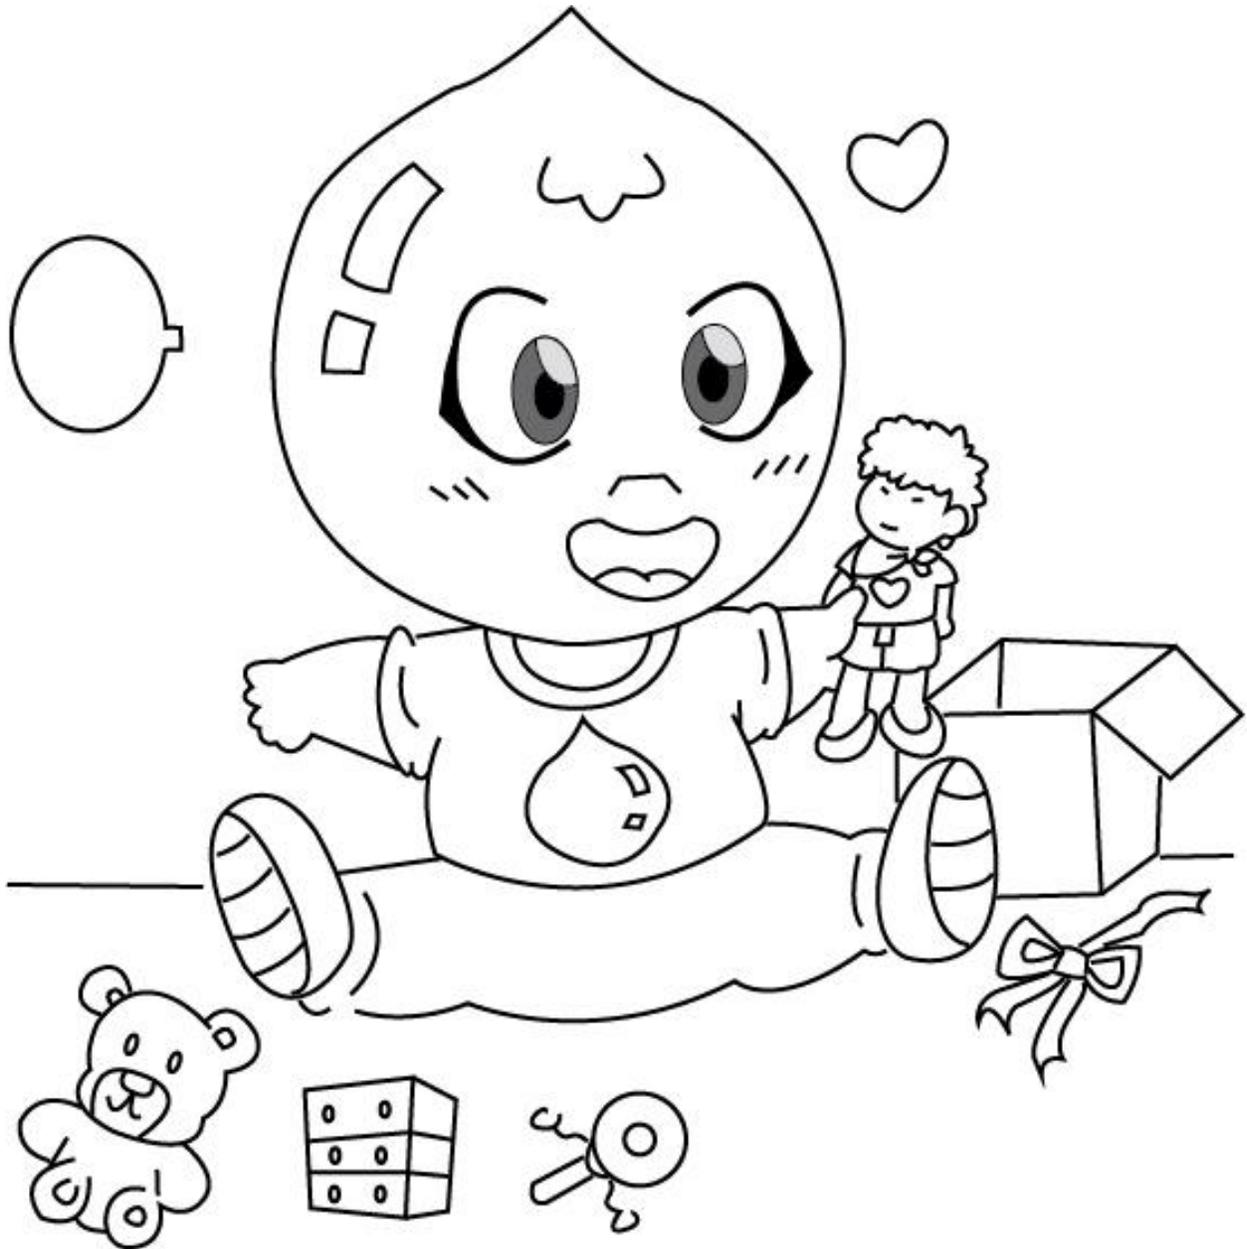

We provide you three free out-of-the-box Drupal packages including Drupal core, contributed modules, theme and sample content. You can pick one of those to download and install.

- For blog or magazine style: [Alphorn](#)
- For organization or non-profit style: [Conch](#)
- For more free themes check out our [free Drupal themes resource](#).

Questions and Feedbacks

We need your comments to make this book better. We are appreciated your feedbacks to info@symphonythemes.com

HOUR 1: INSTALLATION

In this chapter, you will learn how to install the Drupal package provided with this book (refer to *Introduction: Download the example code for this book*). The packages include Drupal core, contributed modules, theme and sample content so you can have a completed site after installation.

SYSTEM REQUIREMENT – BEST CONFIGURATION

You may install in a local environment first or you can start with a hosting straight away. Drupal consumes more resources than other CMSes so do not pick a cheap hosting. We recommend this following hosting configuration:

- **Web server:** Apache 2.x on Linux hosting
- **Database:** MySQL 5.0.15 or higher with PDO enabled.
- **PHP:** 5.2.5 or higher with PHP memory limit of 32MB.

This hosting configuration is popular in any hosting providers. Drupal can also run in other web servers or database, but to avoid troubles when operating your Drupal site later, please use this best configuration.

More info on Drupal requirements is available at <http://drupal.org/requirements>

INSTALLATION

Step 1: Download the example code package with this book.

We provide you three free out-of-the-box Drupal packages including Drupal core, contributed modules, theme and sample content. You can pick one of those to download and install.

- For blog or magazine style: [Alphorn](#)
- For organization or non-profit style: [Conch](#)
- For more free themes check out our [free Drupal themes resource](#).

Please extract the compressed files and choose the **fullsite_package.zip** file. The other zip file is the theme only package which is good for developers. In this book, we will use the fullsite_package.zip only because it is the most convenient.

Step 2: Upload to public_html folder and extract

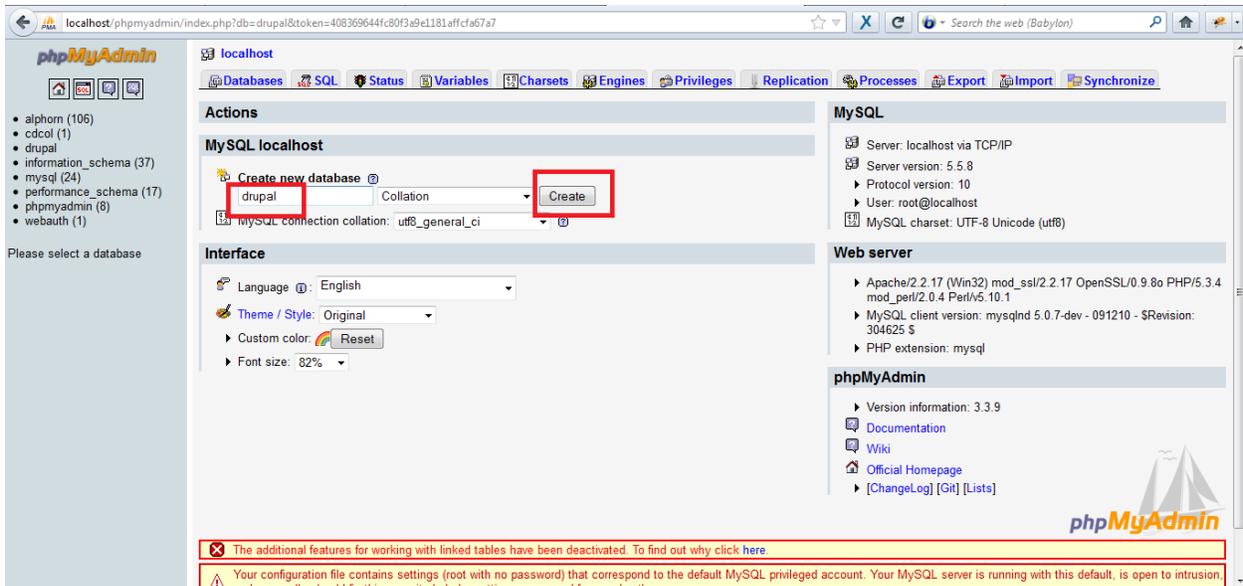

You can use a FTP client tool such as Filezilla or CuteFTP to upload **all files** inside the **fullsite_package.zip** package to your **public_html** folder on your hosting. This way, after the installation is completed, the script will appear once you type something like <http://yourdomainname.com> in your web browser.

Alternatively, you can create a subfolder under public_html and upload the content of fullsite_package.zip there. The Drupal installation will be available at: <http://yourdomainname.com/subfolder>.

Step 3: Create a new database

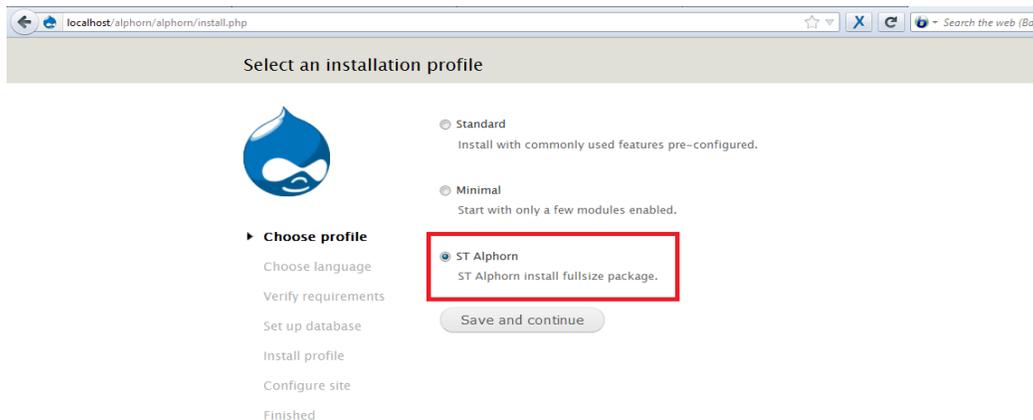

Create a new database through your hosting provider's control panel. Make a note of the database name.

Create a user, add that user to the database, and grant the user full rights on the database. Make a note of the username and password.

Step 4: Run the installation script

Using your web browser, navigate to the base URL of your new website. When you go to your new website, you should see the Drupal installation page. The installation wizard will guide you through the process of setting up your Drupal website. Select the Symphony's profile (in this case Alphorn) and click "Save and continue"

On the Choose language page, select English. Click Save and continue.

Step 5: Enter database details

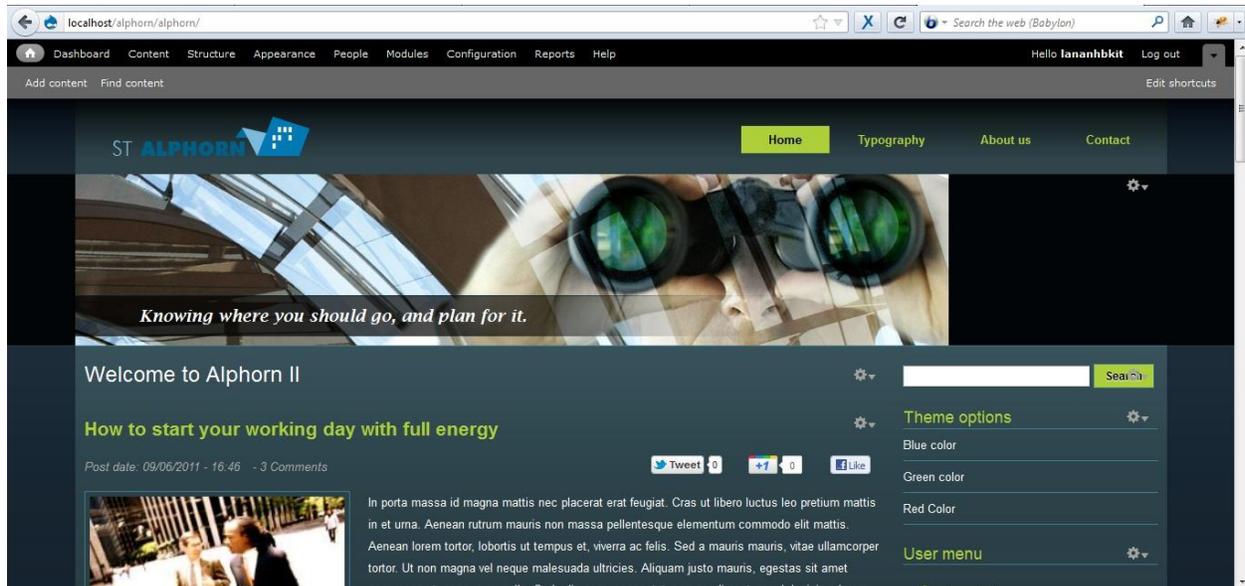

On the Database configuration page, select MySQL or the type of database that you are using. Enter the database name, database user name and password which you have created in Step 3. Click on the “Save and continue”. It will take 20-30 seconds; you just need to wait until it proceeds to the next screen.

Step 6: Input your site information

In this section, the most important pieces of information are **Username** and **Password** of the administrator account. Other information can be filled arbitrarily and easily changed in the future.

Step 7: Done!

The installation is completed and you can navigate your first Drupal site now. This is how your site looks like when you choose the Alphorn package.

TROUBLE SHOOTING ISSUES

When troubleshooting problems for many customers, we found those issues are frequently met.

- **Memory limit:** Drupal consumes more memory than other sources. Therefore, you need have to increase memory limit for Drupal.
<http://drupal.org/node/207036>
- **Clean URL:** if you see your image thumbnails do not display properly, and your URLs have many parameters, it is due to Clean URL. To use "Clean URLs" feature on an Apache web server, you will need the mod_rewrite module and the access permission to local .htaccess files.
- **PHP:** in rare cases, your hosting provides PHP4. Although Drupal can still runs with PHP 4.3.5, but many contributed modules will not work properly with PHP4. So you should ensure your PHP version is 5 and above.
- **Fatal error: Class 'PDO' not found:** you receive this message when PDO is not enabled in your hosting. Please configure your PHP setting to enable it.

HOUR 2: BASIC CUSTOMIZATION

INTRODUCE TO LAYOUT, ELEMENTS IN SYMPHONY SITE

The screenshot shows the ST ALPHORN website layout with the following numbered callouts:

- 1:** Header area containing the logo and navigation menu.
- 2:** Slideshow banner at the top of the main content area.
- 3:** Main content area featuring a featured article with a large image and text.
- 4:** Sidebar area containing a search box, theme options, user login form, and social media links.
- 5:** A grid of four smaller content blocks at the bottom of the page.
- 6:** Footer area at the bottom of the page.

Region #1: Header

- Logo
- Menu

Region #2: Top

- Slideshow

Region #3: Content

- Blog posts

Region #4: Sidebar

- Search
- Navigation
- User login
- HTML Block
- Poll
- Recent comments

Region #5: Postscript

- HTML Block 1
- HTML Block 2
- HTML Block 3
- HTML Block 4

Region #6: Footer

- Footer logo
- Footer menu

CHANGE LOGO AND FAVICON

First thing you need to do with the new website, change the website logo to yours, and the favicon.

- **Logo:** the clickable site logo in the upper-left corner.
- **Favicon:** and the 16-by-16-pixel “shortcut” icon next to the URL in your browser’s address bar.

Please go to the theme administration page at **Admin > Appearance**, then select corresponding theme, in this case, either **Alphorn** or **Conch**.

Change logo

Step 1: In the “**Toggle display**” section, make sure the “**Logo**” checkbox is checked.

Step 2: In the “**Logo image settings**” section, uncheck the “**Use the default logo**” checkbox.

LOGO IMAGE SETTINGS

If toggled on, the following logo will be displayed.

Use the default logo
Check here if you want the theme to use the logo supplied with it.

Path to custom logo

The path to the file you would like to use as your logo file instead of the default logo.

Upload logo image

If you don't have direct file access to the server, use this field to [upload your logo](#).

Step 3: If you’ve already uploaded the graphic to your server, you can type in its path directly in the “**Path to custom logo**” box. Otherwise, click the **Browse** button, find the graphic you want to use on your computer, then scroll to the bottom of the screen and click “**Save configuration**”.

Don't immediately see a change? Try doing a "power refresh" (holding Ctrl + F5) in your browser to throw away the old version in your browser's cache.

Change Favicon

Step 1: In the "Shortcut icon settings" section, uncheck the "Use the default shortcut icon" checkbox.

Step 2: If you've already uploaded the graphic to your server, you can type in its path directly in the "**Path to custom icon**" box. Otherwise, click the Browse button, find the graphic you want to use on your computer, then scroll to the bottom of the screen and click "**Save configuration**". (PNG and GIF graphics are best, as some versions of Internet Explorer don't recognize JPG shortcut icons.)

Don't immediately see a change? Try doing a "power refresh" in your browser to throw away the old version in your browser's cache.

SHORTCUT ICON SETTINGS

Your shortcut icon, or 'favicon', is displayed in the address bar and bookmarks of most browsers.

Use the default shortcut icon.
Check here if you want the theme to use the default shortcut icon.

Path to custom icon

The path to the image file you would like to use as your custom shortcut icon.

Upload icon image

If you don't have direct file access to the server, use this field to upload your shortcut icon.

SITE INFORMATION

Step 1: Now, let's change the site information to yours. Please go to **Admin > Configuration > Site Information**

Step 2: In addition to Site name, which was set during install, you can also add a **slogan**, **mission**, and **footer**. Other options include setting a name for anonymous users and changing the default front page setting.

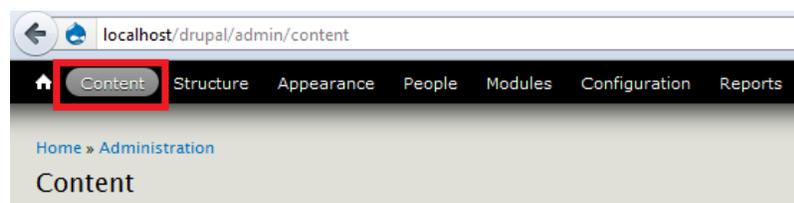

The screenshot shows the 'Site information' configuration page in Drupal 7. The 'SITE DETAILS' section includes fields for 'Site name' (localhost), 'Slogan', and 'E-mail address' (lasmh2004@gmail.com). The 'FRONT PAGE' section includes 'Number of posts on front page' (10) and 'Default front page' (http://localhost/alphorn/alphorn/blog). The 'ERROR PAGES' section includes 'Default 403 (access denied) page' and 'Default 404 (not found) page', both set to http://localhost/alphorn/alphorn/. A 'Save configuration' button is located at the bottom.

MANAGE CONTENT

It is time for you to create the first content of your site. In our install profile, we create sample content with dummy text. This is for demonstration only. You have to publish your own content. This section shows how to manage content in Drupal.

Create content

Step 1: Go to **Admin > Content > Add content**

Step 2: Choose a content type that you need. There

are three common content types:

- **Article:** when you create some new information such as press releases, site announcements and blog entries, you can choose "Article" content type.
- **Page:** is used for information that rarely changes, such as "About us".
- **Newsletter:** is the newsletter issue to be sent to your subscribing readers.

Step 3: Input all the necessary information for your article. You can use the CKEditor to write text instead of a plain one by clicking on **Text format** and choose **Full HTML**. Click **Save** to end editing.

The screenshot shows the 'Create Article' form in Drupal 7. The form is divided into several sections:

- Title:** A text input field with a red box around it.
- Tags:** A text input field with a red box around it, containing the placeholder text "Enter a comma-separated list of words to describe your content."
- Body (Edit summary):** A large text area for writing the article content.
- Text format:** A dropdown menu currently set to "Filtered HTML". A red box highlights the "Browse..." button next to it.
- Image:** A section for uploading an image, featuring a "Browse..." button and an "Upload" button, both highlighted with red boxes.
- Revision information:** A section containing a "Create new revision" checkbox and a "Revision log message" text area.
- Buttons:** At the bottom, there are "Save" and "Preview" buttons. The "Save" button is highlighted with a red box.

Edit content

Step 1: Go to **Admin > Content**, select the node that you want to edit, then click to **Edit** link.

The screenshot shows the Drupal 7 Content administration interface. At the top, there are navigation tabs for 'CONTENT', 'COMMENTS', and 'NEWSLETTERS'. Below the navigation, there are sections for 'SHOW ONLY ITEMS WHERE' (with filters for status and type) and 'UPDATE OPTIONS' (with a 'Publish selected content' dropdown and an 'Update' button). The main content is a table with the following data:

<input type="checkbox"/>	TITLE	TYPE	AUTHOR	STATUS	UPDATED	OPERATIONS
<input type="checkbox"/>	testslideshow	Slideshow	lananhbkit	published	03/26/2012 - 12:25	edit delete
<input type="checkbox"/>	Red Color	Basic page	lananhbkit	published	09/09/2011 - 17:11	edit delete

Step 2: Edit the information such as Intro text, Body, Image and so on, then click on Save.

Delete content

Step 1: Go to **Admin > Content**. If you want to delete only a specific content, just click on the **Delete** link.

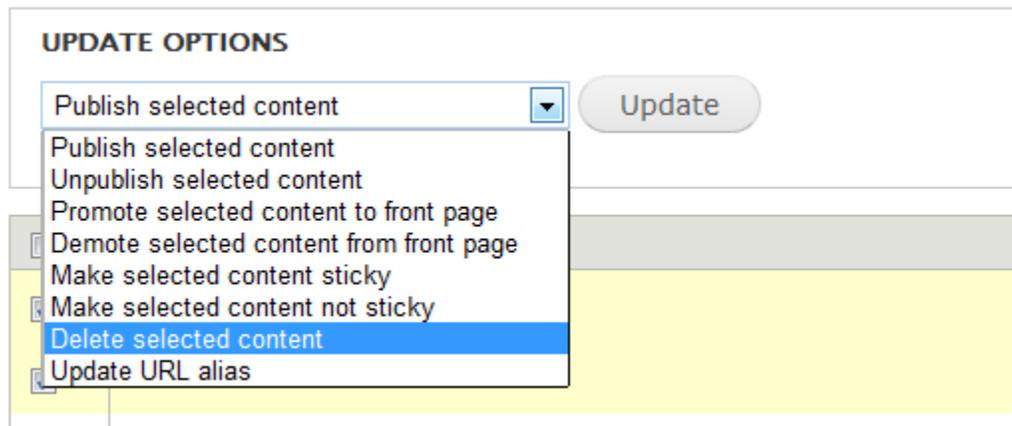

The screenshot shows the Drupal 7 Content administration interface. At the top, there are navigation tabs for 'CONTENT', 'COMMENTS', and 'NEWSLETTERS'. Below the navigation, there are sections for 'SHOW ONLY ITEMS WHERE' (with filters for status and type) and 'UPDATE OPTIONS' (with a 'Publish selected content' dropdown and an 'Update' button). The main content is a table with the following data:

<input type="checkbox"/>	TITLE	TYPE	AUTHOR	STATUS	UPDATED	OPERATIONS
<input type="checkbox"/>	testslideshow updated	Slideshow	lananhbkit	published	03/27/2012 - 10:09	edit delete
<input type="checkbox"/>	Red Color new	Basic page	lananhbkit	published	03/27/2012 - 10:09	edit delete

Step 2: If you want to delete some nodes at the same time, please check the box of the left of each node

UPDATE OPTIONS						
Publish selected content <input type="button" value="Update"/>						
<input type="checkbox"/>	TITLE	TYPE	AUTHOR	STATUS	UPDATED	OPERATIONS
<input checked="" type="checkbox"/>	testslideshow updated	Slideshow	lananhbkit	published	03/27/2012 - 10:09	edit delete
<input checked="" type="checkbox"/>	Red Color new	Basic page	lananhbkit	published	03/27/2012 - 10:09	edit delete
<input type="checkbox"/>	Green color	Basic page	lananhbkit	published	09/09/2011 - 16:54	edit delete
<input type="checkbox"/>	Blue color	Basic page	lananhbkit	published	09/09/2011 - 16:53	edit delete

Step 3: In the "**Update options**" drop down box select "**Delete selected content**", then click on **Update** button.

Step 4: Confirm that you want to delete.

+ Add content

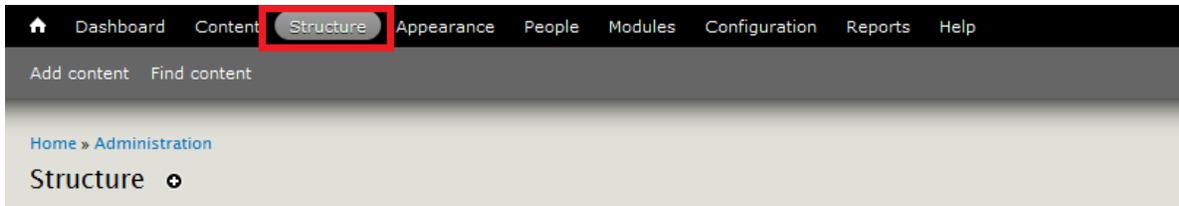

- testslideshow
- Red Color

This action cannot be undone.

[Cancel](#)

MANAGE MENU

After creating some pages or articles, you may want to add links to them in the menu. To manage menu, we should go to **Admin > Structure > Menus**

✖

- There is a security update available for your version of Drupal. To ensure the security of your server, you should update Drupal and to install your missing updates.
- There are security updates available for one or more of your modules or themes. To ensure the security of your site, you should update these modules or themes and to install your missing updates.

- ▶ **Blocks**
Configure what block content appears in your site's sidebars and other regions.
- ▶ **Contact form**
Create a system contact form and set up categories for the form to use.
- ▶ **Content types**
Manage content types, including default status, front page promotion, comment settings, etc.
- ▶ **Menus**
Add new menus to your site, edit existing menus, and rename and reorganize menu links.
- ▶ **Newsletters**
List, add and edit newsletter categories.

Create menu

Step 1: Go to **Admin > Structure > Menus**, click on **Add menu**

[+ Add menu](#)

TITLE	OPERATIONS
Footer	list links edit menu add link
Main menu <small>The <i>Main</i> menu is used on many sites to show the major sections of the site, often in a top navigation bar.</small>	list links edit menu add link
Management <small>The <i>Management</i> menu contains links for administrative tasks.</small>	list links edit menu add link
Navigation <small>The <i>Navigation</i> menu contains links intended for site visitors. Links are added to the <i>Navigation</i> menu automatically by some modules.</small>	list links edit menu add link
Theme options	list links edit menu add link
User menu <small>The <i>User</i> menu contains links related to the user's account, as well as the 'Log out' link.</small>	list links edit menu add link

Step 2: Please declare all the necessary information for your menu. Finally click on **Save**.

localhost/alphorn/alphorn/admin/structure/menu/add

Add content Find content Edit shortcuts

Home > Administration > Structure > Menus

Menus **o** LIST MENUS SETTINGS

You can enable the newly-created block for this menu on the [Blocks administration page](#).

Title *

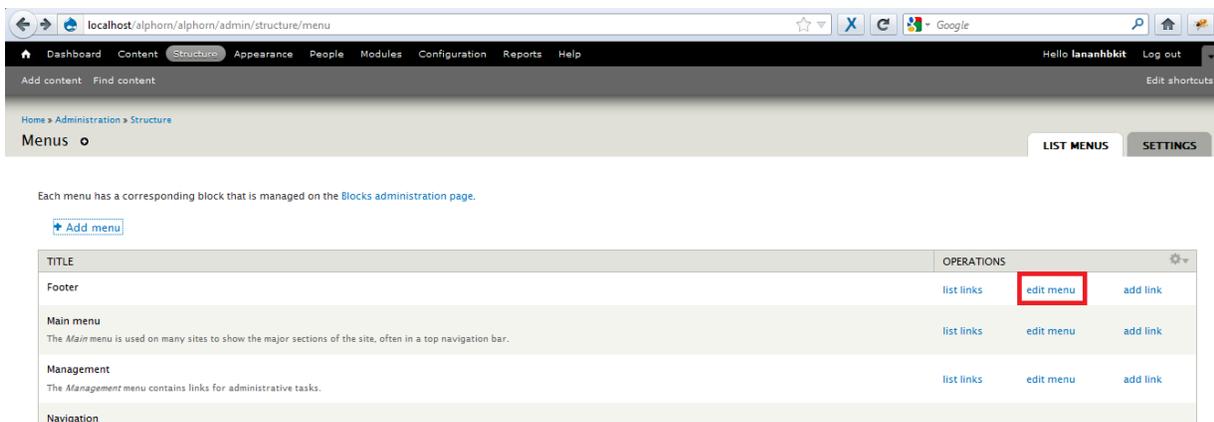

Description

Save

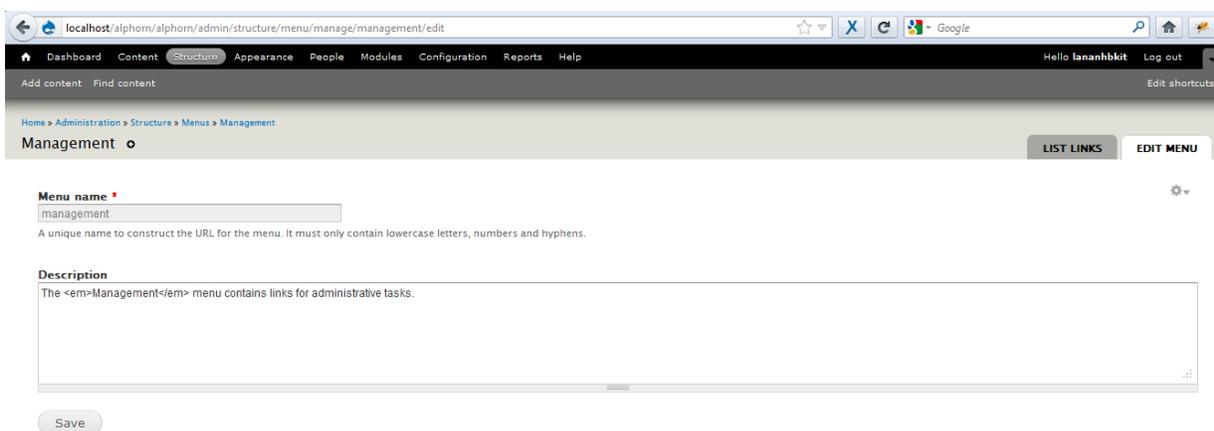

- Path: the path this menu item links to. It can be an internal Drupal path such as **node/82** or an external URL such as <http://drupal.org>. Enter **<front>** to link to the front page.
- Menu link title: the link text corresponding to this item that should appear in the menu.
- Enabled: enable or disable this menu item
- Expanded: if this option is selected and the menu item has children, it will always appear as expanded.
- Parent item and weight: choose parent item for current item, and weight is the order of appearance.

Edit menu

Step 1: In the menu page, click to **Edit** link to edit a menu item.

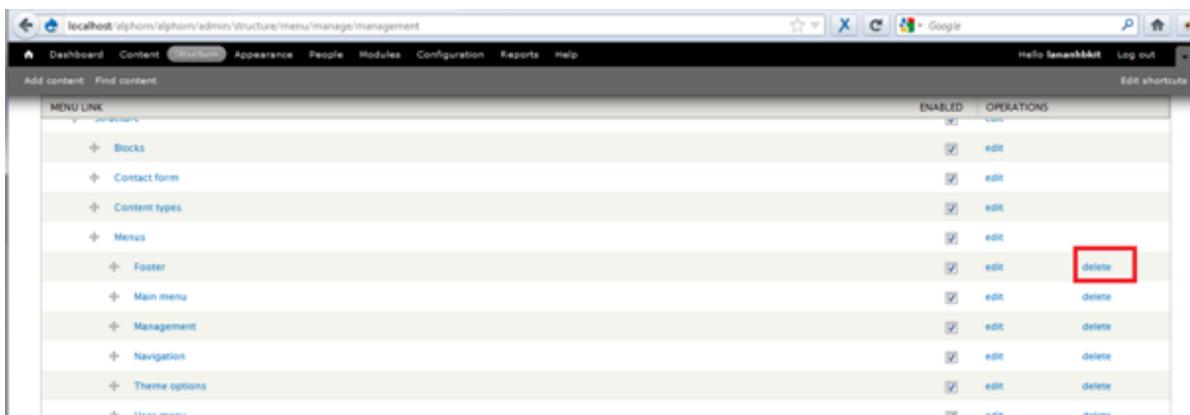

Step 2: Edit the information then click on save.

Delete menu

Step 1: In the menu page, click to **Delete** link to delete a menu item.

Step 2: Click to **Confirm** button.

MANAGE BLOCKS

As you have seen in the "Introduce to layout, element in a Symphony site" page, there is a home page layout, which has many **blocks** like "Recent news", "Polls", "User login", "Who's new" and so on. Blocks are the boxes of content that can be displayed in regions (such as footer or sidebar) on your page.

Change block position

There are many blocks that you may not want to display, or you may want to display them in different places. Please follow these steps:

Step 1: Go to **Admin > Structure > Blocks**, a list of blocks in the site will appear.

Step 2: Select a block that you want to change position then click on the select box to select position for it.

BLOCK	REGION	WEIGHT
Sidebar First		
<i>No blocks in this region</i>		
Sidebar Second		
Search form	Sidebar Second	-17
Theme options	- None -	-16
User login	User Bar Second	-15
User menu	Menu	-14
Social Icons	Sidebar First	-13
Most recent poll	Sidebar Second	-12
	Header First	
	Header Second	
	Preface First	
	Preface Second	
	Preface Third	
	Postscript First	

If you do not want to display a certain block, just select **None**.

You can also drag-and-drop blocks into different regions as well as reorder the blocks within a region.

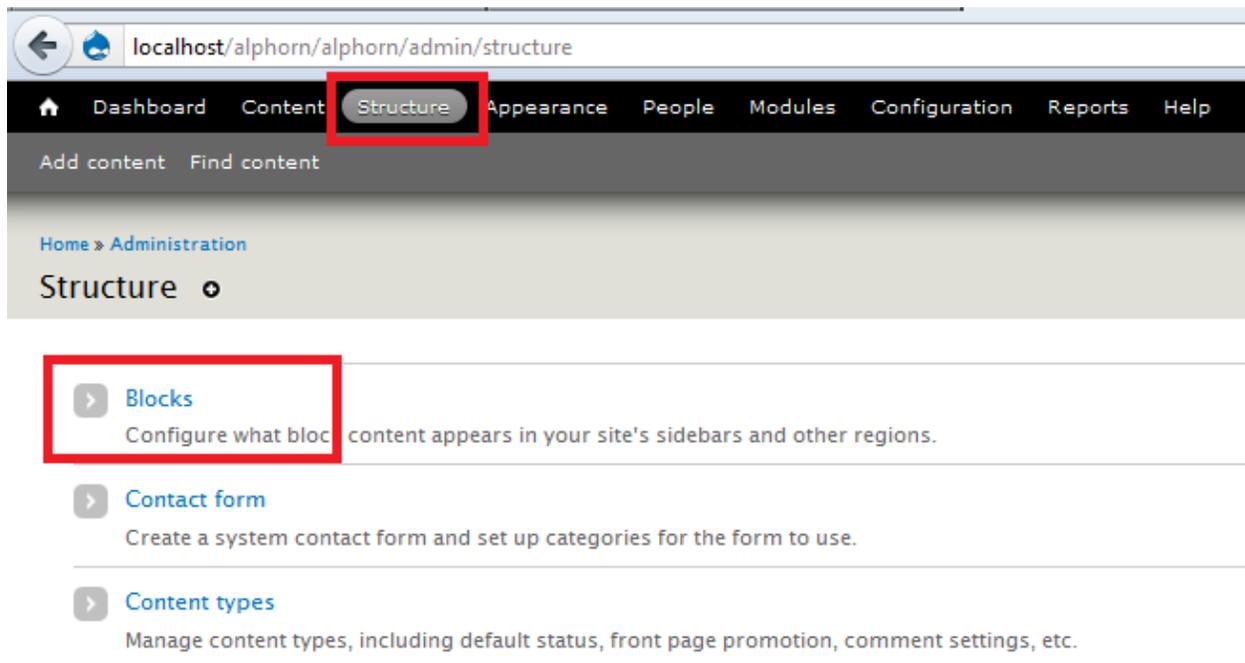

Step 3: Remember to click on **Save** before you end editing.

Create a custom HTML block

Most of the time, blocks are created by enabling modules. For instance, enabling the core **"Poll"** module makes the "Most Recent Polls" block available. You can then modify its appearance, shape, size and position - or which pages it appears on.

How about creating a custom block of your own, for example, an ***About me*** block so you can introduce yourself to the world. Please follow these steps:

Step 1: Go to **Admin > Structure > Block**

Step 2: Click on **"Add Block"**.

Step 3: Please declare all the necessary information for your block.

Show block on specific pages

All pages except those listed
 Only the listed pages

Specify pages by using their paths. Enter one path per line. The "*" character is a wildcard. Example paths are `blog` for the blog page and `blog/*` for every personal blog. `</front>` is the front page.

- Insert a Block description, **Block - About me** for example, which will be displayed on the block overview page so you can find it easily later.
- Insert a Title for the block, **About me** for example.

- Insert the body content for the block. Please write some lines to introduce yourself.
- *Set User, Role, and Page specific visibility settings:* you may skip it for now. I will have a more detailed guide in the next section “Edit block”.

When you click on **Save**, the block is created but not placed in a region by default. You will need to drag and drop it into a region in order for it to show up on the site.

Edit block

Step 1: Go to the Blocks overview page (**Admin > Structure > Block**) to configure the blocks on your site.

Step 2: Next to each block you can click **Configure** to change the specific block settings to edit that specific block.

The screenshot shows the Drupal 7 administration interface for configuring a block. At the top, there is a navigation bar with links for Dashboard, Content, Structure, Appearance, People, Modules, Configuration, Reports, and Help. The user is logged in as 'Hello Ianahbkit'. The breadcrumb trail is 'Home > Administration > Structure > Blocks'. The current page title is "'Search form' block".

The configuration form includes the following sections:

- Block title:** A text input field with a placeholder "Override the default title for the block. Use <none> to display no title, or leave blank to use the default block title."
- REGION SETTINGS:** A section titled "Specify in which themes and regions this block is displayed." containing three dropdown menus:
 - ST alphorn (default theme):** Set to "Sidebar Second".
 - Seven (administration theme):** Set to "Dashboard (sidebar)".
 - Bartik:** Set to "Sidebar second".
- Visibility settings:** A section with a sidebar on the left and a main area on the right.
 - Pages:** Not restricted.
 - Content types:** Not restricted.
 - Roles:** Not restricted.
 - Users:** Not customizable.
 - Show block on specific pages:** Two radio buttons: "All pages except those listed" (selected) and "Only the listed pages". Below is a large text area for entering paths, with a note: "Specify pages by using their paths. Enter one path per line. The '*' character is a wildcard. Example paths are blog for the blog page and blog/* for every personal blog. <front> is the front page."

A red box highlights the "Save block" button at the bottom left of the form.

- Block title: Allows you to override the default title for the block
- Block content: if it is a custom HTML block, you can edit the content of this block.

Step 3: Visibility settings

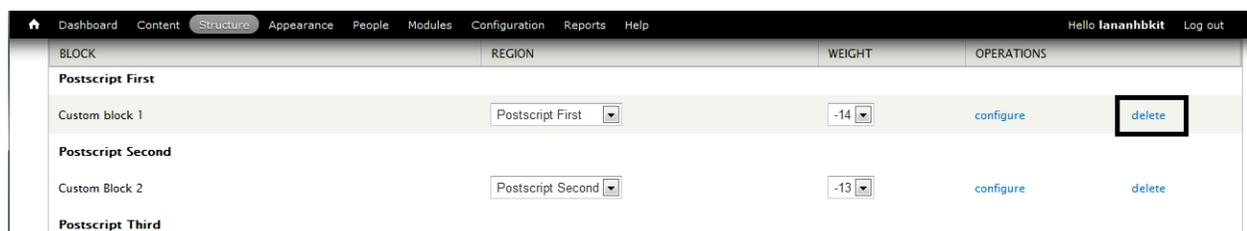

If you want this block to appear on any page, you do not need to do anything with this setting. When you want this block to show on certain pages and not on other pages, please see some settings below:

- Pages: you can set this block to show either on “All pages except those listed” or “Only the listed pages”. For example, if you want the slideshow to show on the front page only, just select “*Only the listed pages*” and enter `<front>` to the textbox below.
- Content types: similarly, you can set the block to show for certain content types only.
- Roles: you can show the block to certain types of users: anonymous, authenticated or administrator.

Delete/disable blocks

You can only delete a custom content block created by you using the following method above. Blocks created by modules can not be deleted using this method.

On the Block overview page (**Admin > Structure > Block**), blocks that can be deleted will have a "delete" link beside them. Clicking this link will present a confirmation page, and clicking the Delete button will remove the block.

BLOCK	REGION	WEIGHT	OPERATIONS
Postscript First			
Custom block 1	Postscript First	-14	configure delete
Postscript Second			
Custom Block 2	Postscript Second	-13	configure delete
Postscript Third			

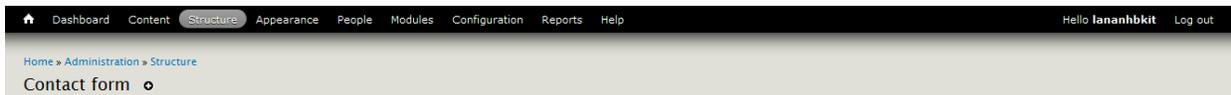

If you just want the block to disappear, please select its **region** to **None** and click on Save. You can always enable it in the future by changing its region.

CONTACT MAIL

The package provides you a built-in contact form. You can change the email of the contact form to yours by:

Step 1: Go to **Admin > Structure > Contact email**

Step 2: Click to the **Edit** link.

Add one or more categories on this page to set up your site-wide [contact form](#).

A [Contact](#) menu item (disabled by default) is added to the Navigation menu, which you can modify on the [Menus administration page](#).

If you would like additional text to appear on the site-wide contact page, use a block. You can create and edit blocks on the [Blocks administration page](#).

[+ Add category](#)

CATEGORY	RECIPIENTS	SELECTED	OPERATIONS
Website feedback	tuthanh.le@gmail.com	Yes	Edit Delete

Step 3: Please change the information you need, then click on **Save**.

The screenshot shows the 'Edit contact category' form. The form has the following fields and options:

- Category:** A text input field containing 'Website feedback'. Below it, there is an example: 'Example: 'website feedback' or 'product information'.'
- Recipients:** A text input field containing 'tuthanh.le@gmail.com'. Below it, there is an example: 'Example: 'webmaster@example.com' or 'sales@example.com,support@example.com'. To specify multiple recipients, separate each e-mail address with a comma.'
- Auto-reply:** A large text area for an optional auto-reply message. Below it, there is a note: 'Optional auto-reply. Leave empty if you do not want to send the user an auto-reply message.'
- Weight:** A dropdown menu set to '0'. Below it, there is a note: 'When listing categories, those with lighter (smaller) weights get listed before categories with heavier (larger) weights. Categories with equal weights are sorted alphabetically.'
- Selected:** A dropdown menu set to 'Yes'. Below it, there is a note: 'Set this to 'Yes' if you would like this category to be selected by default.'
- Save:** A button at the bottom of the form, highlighted with a red box.

PERFORMANCE

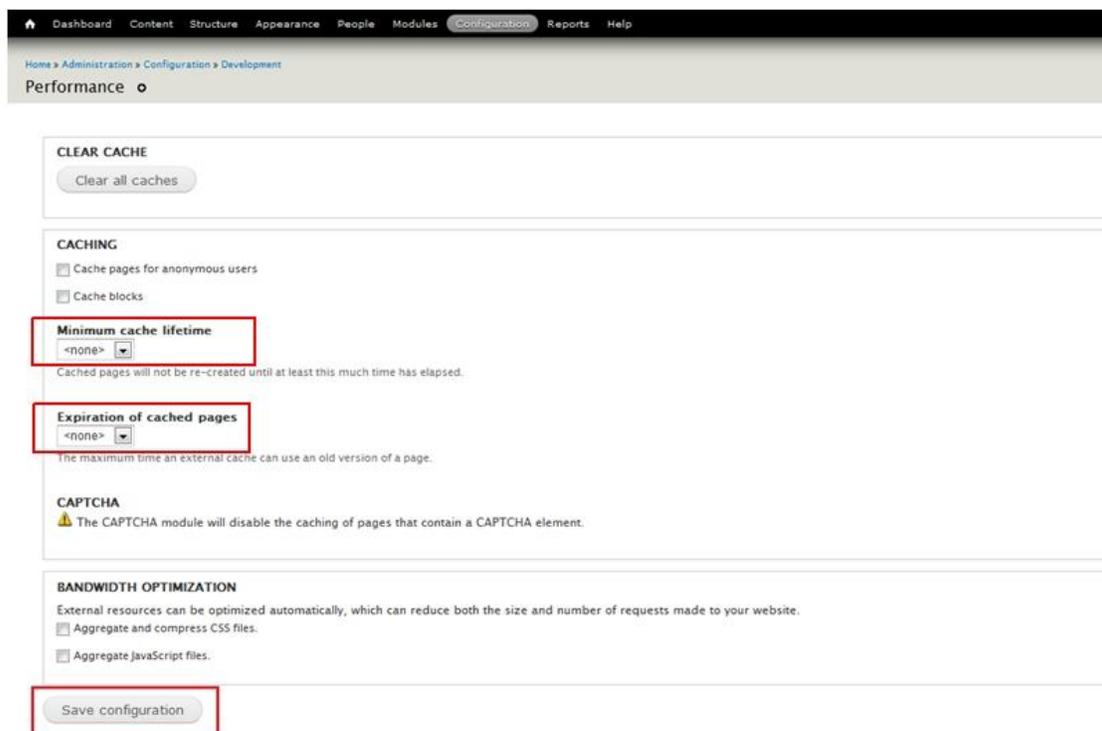

Pretty much done! If you feel it is time to launch the site, you can turn on the cache.

Cache: Caches are used to improve the performance of your Drupal site. When a user visits a page on your site, Drupal builds the new page by default. After that, another user goes to your site, Drupal have to build it twice. When you turn on the Cache mode, Drupal will build pages, save them and return to other users instead of rebuilding again and again.

During development, caching should be disabled (default). Once the site is ready for production you can turn on the caching.

Step 1: Please go to **Administer > Configuration > Performance**

Step 2: Turn on caching by setting these two variables: **minimum cache lifetime** and **expiration of cached pages**. Since your website is new, you can set the **minimum cache lifetime** to **12 hours** and **expiration of cached pages** to **1 day**. It is good enough.

More complex site will need different values for these two variables. Also, it needs more advanced caching techniques. It is another story that we do not need to care much yet now.

HOUR 3: SEO - SEARCH ENGINE OPTIMIZATION

Search engine optimization, as we all know, is vital to a business because 90% of all online traffic is achieved through the various search engines. You will not find a secret weapon to get your Drupal site to the top of Google search results here. SEO is a huge and changing topic that takes a lot of time and experiences to learn.

I am not an SEO expert. I have small budget for advertising, so I have to figure out how to do SEO with lower costs but still have good results. I can not spend huge money on off-site SEO like buying ads. It is too expensive and risky. Therefore, I'd rather focus on on-site SEO, ie, making my content attractive and let Google knows about it. Fortunately, Drupal provides many great tools to help me with on-site SEO.

Pick a niche to compete

First, **choose keywords** which you want your page to rank high in search results. You can use [Google Keyword External](#) tool to get a better ideas of keywords. There are two factors that you need to consider: search **frequency** and **competition**.

- If you choose a keyword that has huge interest but also fierce competition (laptops or health insurance for example), your chance to get high ranking is very low.
- On the other hand, picking a keyword with low competition but no one cares does not bring you to anywhere.

Therefore, it is up to you to select keywords that you can potentially compete and get reasonable amount of traffic.

[Google Insight for Search](#) is another great tool to find the interest of your keywords over time so you can predict the future. It also layout which regions are most interested in the topic that you pick and some raising related keywords.

You must have a great content

Second, you should have **great content** for your readers. Content is king. No one would visit your site if you have crappy stuffs. They come to you because you have some great things that they want to see. No SEO techniques will help you to go further if you do not have a good content.

Now, SEO in Drupal

I hope to show some basic techniques using Drupal that you can use to improve your overall web site optimization. We have already configured on-site SEO for this theme including path auto, page title and megatag editor. Follow this section to have a complete view of them.

URL ALIASES

If you see a website link like this <http://yourdomain.com/node/83>, it is 99.99% powered by Drupal. The link pattern of node/[number] is the default pattern of Drupal content links. However, if it looks like <http://yourdomain.com/about-us>, it will look more readable to human being.

Drupal has a feature called "URL Alias" that allows you to provide a more understandable name to the content. As far as browsers, servers, and search engines go, it is not required. But for humans, it is nearly mandatory.

You can administer the URL Aliases directly on the node edit or add forms, or by going to **Admin > Configuration > URL Aliases**

Automatic setting aliases

I recommend defining all URL patterns beforehand. Please spend sometime to think through your Drupal pathauto URL aliases settings before creating a bunch of content so you do not have to worry about the aliases changing. For example:

- Your product nodes may look like: /product/[node-title]
- Your images may look like: /image/[node-title]
- Your blog posts may look like: /blog/[node-title]

To do it, please click on the **Pattern** tab.

For example, if you want all blog posts to start with "blogs" and include the user id and title, you could use: **blogs/[user-raw]/[title-raw]**

Home » Administration » Configuration » Search and metadata » URL aliases

URL aliases

PAGE TITLE

Page title is mandatory for human reading and SEO. Using specific and unique keywords in page titles make your pages more descriptive. Search engines also use page titles as a major weight to determine the relevance and rank. Therefore, you should have unique page title or every page on your site.

Please go to **Admin > Configuration > Page title** control the page titles. Administrators can configure patterns for how the title should be structured.

The default title pattern is: **[page-title] | [site-name]**.

For example, if your site name is "Great book for cooks", your **About us** page will have the title as "About us | Great book for cooks".

Home > Administration > Configuration > Search and metadata
Page titles

Page Title provides control over the <title> element on a page using token patterns and an optional textfield to override the title of the item (be it a node, term, user or other). The Token Scope column lets you know which tokens are available for this field (Global is always available). Please click on the **more help...** link below if you need further assistance.

[More Help...](#)

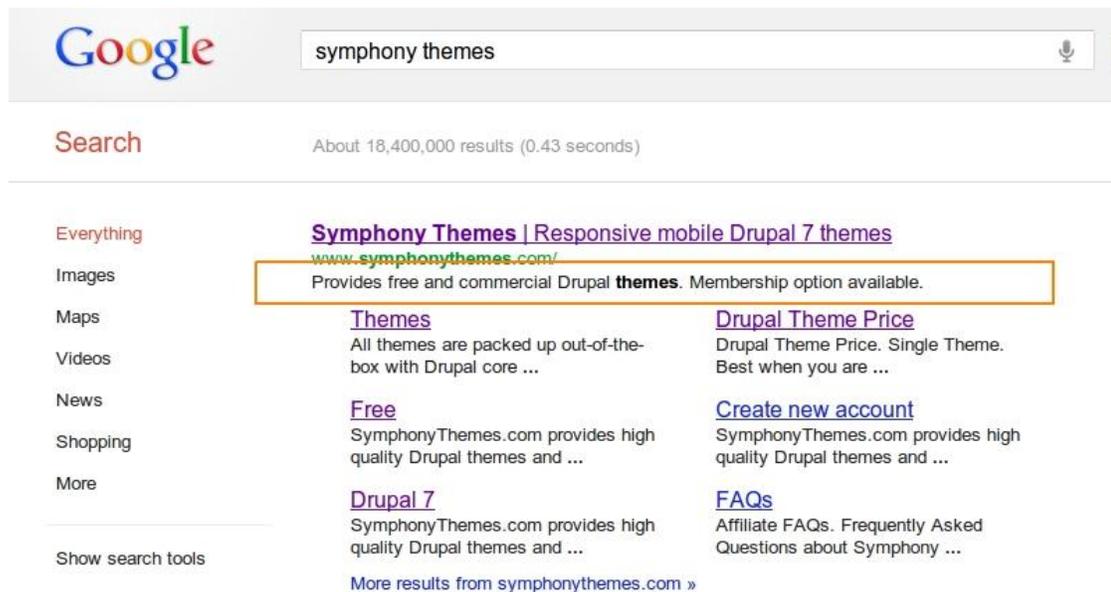

PAGE TYPE	TOKEN SCOPE	PATTERN	SHOW FIELD
Default	Global	Default [current-page:page-title] [site:name] <small>This pattern will be used as a fallback (ie, when no other pattern is defined)</small>	
Frontpage	Global	Frontpage [site:name] [site:slogan] <small>This pattern will be used for the site frontpage</small>	
Pager Suffix	Global	Pager Suffix <input type="text"/> <small>This pattern will be appended to a page title for any given page with a pager on it</small>	
Comment Child Reply	Global Comment Node	Comment Child Reply <input type="text"/> <small>This pattern will be used for comment reply pages where the reply is to an existing "comment" (eg a comment thread)</small>	

At the end, please click on the **Save configuration** button.

META TAG

Meta tags are meta data of a HTML page which supply additional information for search engines. The most important tags in SEO practices are **description** and **keywords**.

- **Description:** describes what your page is about. When you search via Google and your pages are listed on the search results, Google will use this tag as the description, like the image below.

- **Keywords:** help search engines to categorize your site. You should provide some concise keywords for your site. Together with other techniques, it can help to boost your site ranking.

Configure meta tags

Step 1: Go to **Admin > Configuration > Meta tags**

Step 2: On the **Meta tags to show on edit** form, you should check **Description** and **Keywords**. If you are experienced in SEO, you can select other parameters.

Step 3: On the Meta tags to output in HTML, you should also check **Description** and **Keywords**.

Those are the most important settings. More options are available below, you can play around them later.

Add a new Meta tags

Definitely, you should create meta tags for the front page. It is mandatory.

Step 1: Please click on **Default and specific meta tags** tab, and then select **Front page**.

- Web page addresses and e-mail addresses turn into links automatically.
- Allowed HTML tags: <a> <cite> <blockquote> <code> <dl> <dt> <dd>
- Lines and paragraphs break automatically.

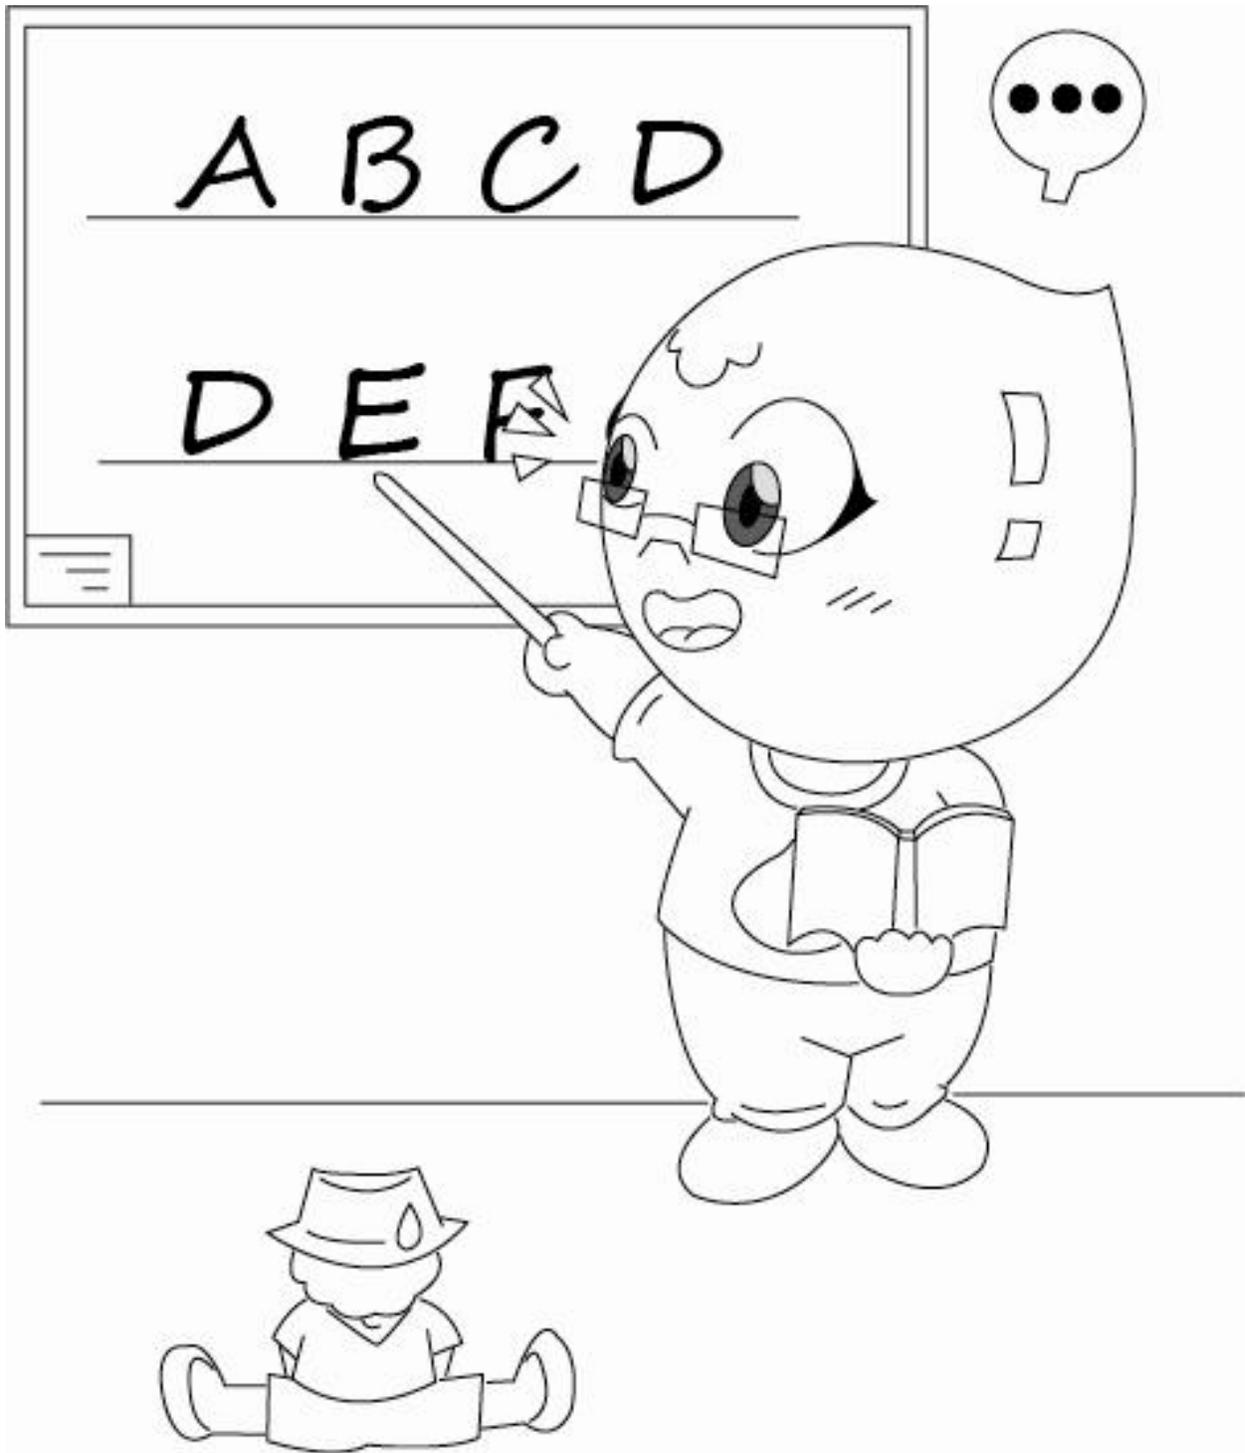

Define a message to be displayed above the site map.

SITE MAP CONTENT

This module provides a site map that gives visitors an overview of your site. It can also display the RSS feeds for all blogs and categories. Play around with all settings.

The sitemap is available at <http://yourdomain.com/sitemap>.

HOUR 4: DAILY SITE CONTENT MANAGEMENT

Your new site is like your baby. You need to take a good care of her. You need to teach her well so the more she grows, the more she knows about the world and

she becomes a good girl. So does your website. This section provides you a detailed guide to manage your Drupal site daily.

CONNECT TO GOOGLE ANALYTIC

A very essential step is to connect your site to Google Analytics to monitor the site traffic.

Step 1: You should first go to [Google Analytics](#), create a profile for your site, and get the account number (smth like UA-xxxx-x).

Step 2: Then go to **Admin > Configuration > Google Analytic**.

Step 2: Paste your Google Analytics account number to the first text box.

The module allows you to add the following statistics features to your site:

- Select tracking.
- Selectively track certain users, roles and pages.
- Monitor what type of links are tracked (downloads, outgoing and mailto).
- Monitor what files are downloaded from your pages.
- Cache the Google Analytics code on your local server for improved page loading times.
- Track user segmentation from Drupal profile data.
- Site Search support.
- AdSense support.

Tracking scope

Domains A single domain	What are you tracking? <ul style="list-style-type: none"> <input checked="" type="radio"/> A single domain (default) Domain: localhost <input type="radio"/> One domain with multiple subdomains Examples: www.example.com, app.example.com, shop.example.com <input type="radio"/> Multiple top-level domains Examples: www.example.com, www.example.net, www.example.org List of top-level domains <div style="border: 1px solid #ccc; height: 40px; margin-top: 5px;"></div> <p><small>If you selected "Multiple top-level domains" above, enter all related top-level domains. Add one domain per line. By default, the data in your reports only includes the path and name of the page, and not the domain name. For more information see section <i>Show separate domain names in Tracking multiple domains</i>.</small></p>
Pages All pages with exceptions	
Roles Not restricted	
Users Not customizable	
Links and downloads Outbound links, Mailto links, Downloads tracked	
Search and AdSense Not tracked	
Privacy Universal web tracking opt-out enabled	

Don't forget click **Save** configuration button.

After that, you can monitor the traffic to your site at Google Analytics.

WRITING BLOG

Writing blog is the best way to communicate with your audience and to provide interesting content to your website. You may be told about bloggers who can earn a lot of money by just blogging. You are probably not a famous blogger now, but nothing stops you to become one, as long as you have some great for your audience. And you can start it now by creating your first blog post.

In **Hour 2 – Basic customization, Manage content** section, you already know how to create new content. We extend this part by providing your a few tips for good SEO.

1. Choose a keyword to write about. You have something in mind to write about, now you need to pick the right keyword. Please go to [Google Keyword External](#) and do some research. Remember to look for a keyword with reasonable amount of traffic and low competition; you are more likely to rank higher.
2. Insert keyword to your blog title. It is very important.
3. Write your blog post long enough (300 – 500 words) and insert keywords on your content. Also, tag your blog posts with important keywords.

Google will crawl your posts automatically. Hopefully, your article may stand in the first page of your targeted keywords.

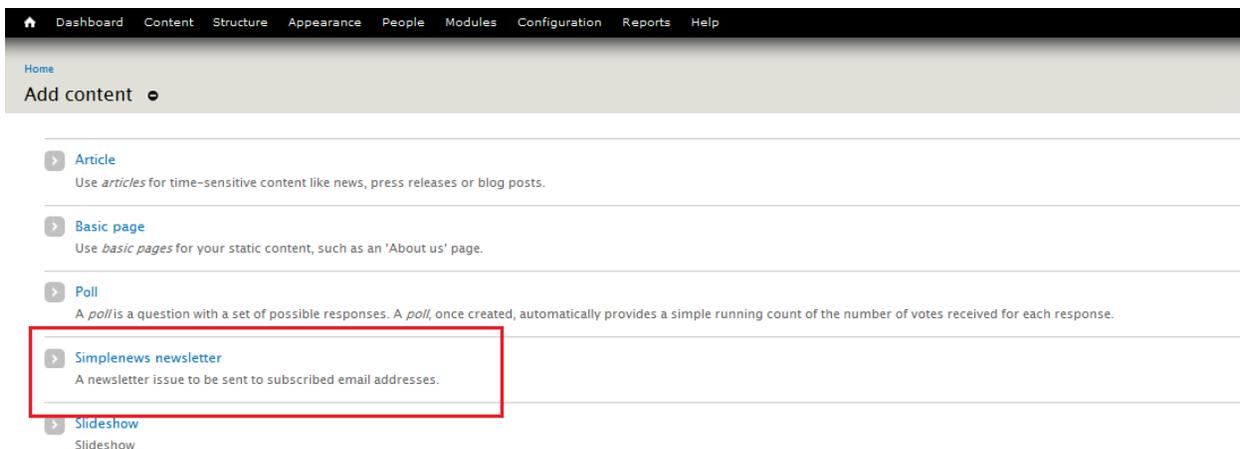

NEWSLETTER

Newsletter is a good way to keep your audience loyalty. When you have interesting stuffs to tell, you can create a newsletter and send to people who subscribed to you.

We use **simplenews** module to publish and send newsletters to lists of subscribers. Both anonymous and authenticated users can opt-in to different mailing lists.

Create a newsletter

Step 1: To create a newsletter, choose **Admin > Content > Add Content**, then choose **Simplenews newsletter**

Step 2: Input all the necessary information for your article and click **Save**.

HOOR 5: TECHNICAL ADMINISTRATION

While the previous chapter “Daily content management” is like giving teaching to your babies, this chapter “Technical administration” is more like taking care of their healths. While they grow up, they may get sick, so you need to keep an eye on them.

REPORTS

Like your medical check reports, the Drupal status report is where you can find a short overview of your site's parameters as well as any problems detected with your running Drupal site.

The status report is available at **Admin > Reports > Status reports**

Here you can find a short overview of your site's parameters as well as any problems detected with your installation. It may be useful to copy and paste this information into support requests filed on drupal.org's support forums and project issue queues.

Drupal	7.8
Access to update.php	Protected
CAPTCHA	Already 0 blocked form submissions
CTools CSS Cache	Exists
Configuration file	Protected
Cron maintenance tasks	Last run 1 hour 24 min ago You can run cron manually . To run cron from outside the site, go to http://localhost/conch/cron.php?cron_key=oGcttLx1hfct4jhFfr1MGA4zKlrmuAulDlxiz4eSYdY
Database system	MySQL, MariaDB, or equivalent
Database system version	5.5.8
Database updates	Up to date
⚠️ Drupal core update status	No update data available No update information available. Run cron or check manually .
File system	Writable (<i>public</i> download method)
GD library rotate and desaturate effects	bundled (2.0.34 compatible)
❌ Google Analytics module	Not configured Google Analytics module has not been configured yet. Please configure its settings from the Google Analytics settings page .

When everything is ok, the report will just have blue and green. If you have some red marks, there should be problems with your site.

Usually, you will receive red warning signs when your Drupal site needs to be updated. We will talk about it in the next section.

AVAILABLE UPDATES

You need to separate two words: **update** and **upgrade**, they mean two different actions.

- **Updating** refers to bring your site up to a latest Drupal minor release, for example, from *Drupal 7.2* to *Drupal 7.8*.
- **Upgrading**, however, is a complex task of moving your site from one major Drupal release to another, such as from *Drupal 6* to *Drupal 7*.

In this section, I only show you how to **update** your Drupal site. Upgrading is a complicated job which you need helps from professional Drupal developers.

Please go to **Admin > Reports > Available updates**, you will find a list of your modules with update status.

Home » Administration » Reports
Available updates

LIST UPDATE SETTINGS

Here you can find information about available updates for your installed modules and themes. Note that each module or theme is part of a "project", which may or may not have the same name, and might include multiple modules or themes within it.

[+ Install new module or theme](#)

Green rows are alright. Yellow rows indicate update available. Red rows are security updates, it is important and you need to update it soon. In the image above, we have both Drupal core updates and module updates available.

- **Update modules:** a Drupal site may have many contributed modules. When those modules have new versions, you should update them. But you do not have to update a module right after its new version is released. I do module upgrading once per month and it is good enough.
- **Update Drupal core:** when a new Drupal core is released, it is necessary to update because the new core may contain security fixes.

BACKUP AND MIGRATE

Before updating your Drupal site, let's do a backup. It is also a good habit to backup your site regularly. I have seen many people crying because their websites disappear because of their misconfigurations or defective hostings. Don't let this scenario happen to you. At least, do a **monthly backup**.

Backup and Migrate module simplifies the task of backing up and restoring your Drupal database or copying your database from one Drupal site to another. With Backup and Migrate you can dump some or all of your database tables to a file download or save to a file on the server, and to restore from an uploaded or previously saved database dump.

Backup

Step 1: Go to **Admin > Configuration > Backup and migrate** and click **Backup now**.

Dashboard Content Structure Appearance People Modules Configuration Reports Help Hello lanah

Advanced Backup

⚠ You must specify a private file system path in the [file system settings](#) to backup to the server.

Use this form to run simple manual backups of your database. Visit the [help page](#) for more help using this module

QUICK BACKUP

Backup from to using

For more backup options, try the [advanced backup page](#).

Restore

Step 1: Go to **Admin > Configuration > Backup and migrate** and click on the **Restore** tab.

Step 2: Browse the backup file you have created earlier, upload it and click to **Restore** button.

Upload a backup and migrate backup file. The restore function will not work with database dumps from other sources such as phpMyAdmin.

Upload a Backup File

Upload a backup file created by this version of this module. For other database backups please use another tool for import. Max file size: 8 MB

ADVANCED OPTIONS

Or you can restore one of the files in your [saved backup destinations](#).

Automatic backup

Scheduled backups are a great tool for important sites. Using this function, you can create automatic schedules to backup your site. It eases the pain of manual work or missing backup schedules.

To set up a schedules backup, you need to follow those steps:

Step1: Create backup destination

Go to **Admin > Configuration > Backup and migrate > Destination**

Dashboard Content Structure Appearance People Modules Configuration Reports Help Hello lananhkik Log out

Home > Administration > Configuration > System > Backup and Migrate

Backup and Migrate

BACKUP RESTORE DESTINATIONS PROFILES SCHEDULES

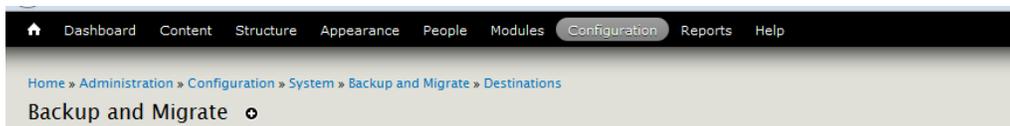

Warning: You must specify a private file system path in the [file system settings](#) to backup to the server.

Destinations are the places you can save your backup files to or them load from.

[+ Add Destination](#)

NAME	TYPE	LOCATION	OPERATIONS
Default Database	MySQL Database	mysql://root@localhost/Conch	override

Click on the **Add Destinations** link and then choose the type of destination you would like to create and complete information for each type.

Choose the type of destination you would like to create:

[Server Directory](#)

Save the backup files to any directory on the server which the web-server can write to.

[MySQL Database](#)

Import the backup directly into another MySQL database. Database destinations can also be used as a source to backup from.

[FTP Directory](#)

Save the backup files to any a directory on an FTP server.

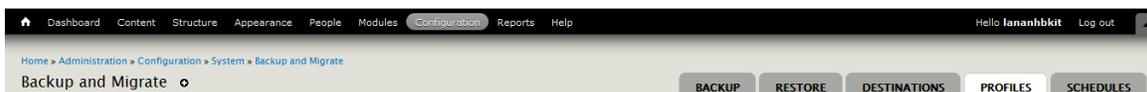

[Amazon S3 Bucket](#)

Save the backup files to a bucket on your [Amazon S3 account](#).

[Email](#)

Send the backup as an email attachment to the specified email address.

Step 2: Go to **Admin > Configuration > Backup and migrate > Profiles** and create a new profile

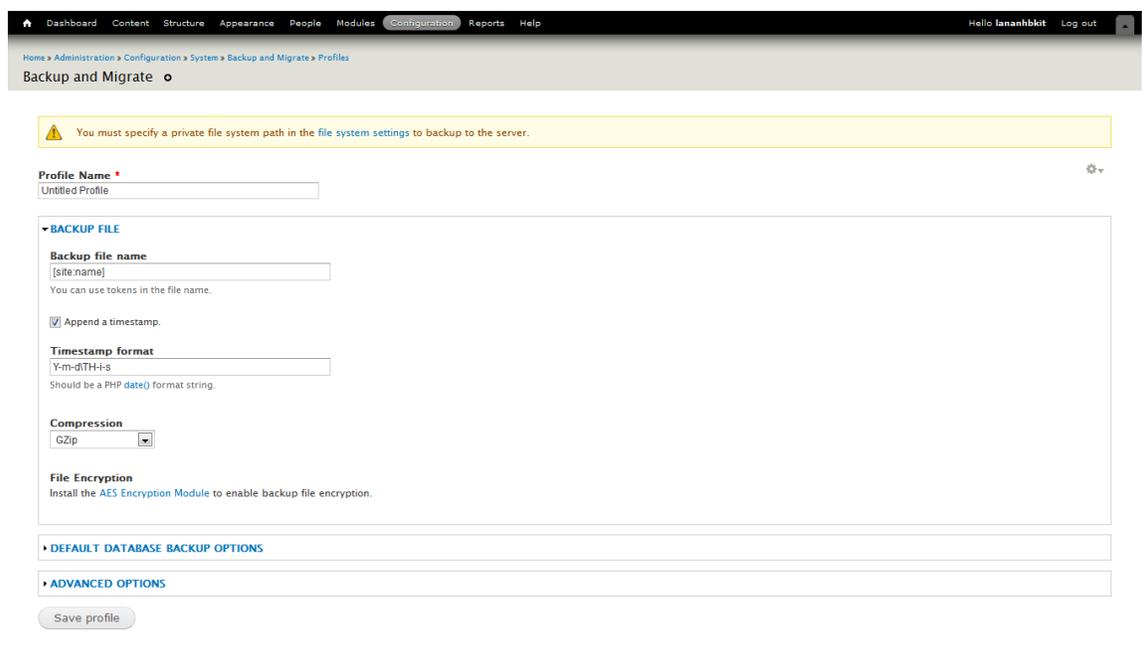

You must specify a private file system path in the [file system settings](#) to backup to the server.

Profiles are saved backup settings. Profiles store your table exclusion settings as well as your backup file name, compression and timestamp settings. You can use profiles in [schedules](#) and for [manual backups](#).

[+ Add Profile](#)

NAME	SOURCE	FILENAME	OPERATIONS
Default Settings	Default Database	[site.name]	override

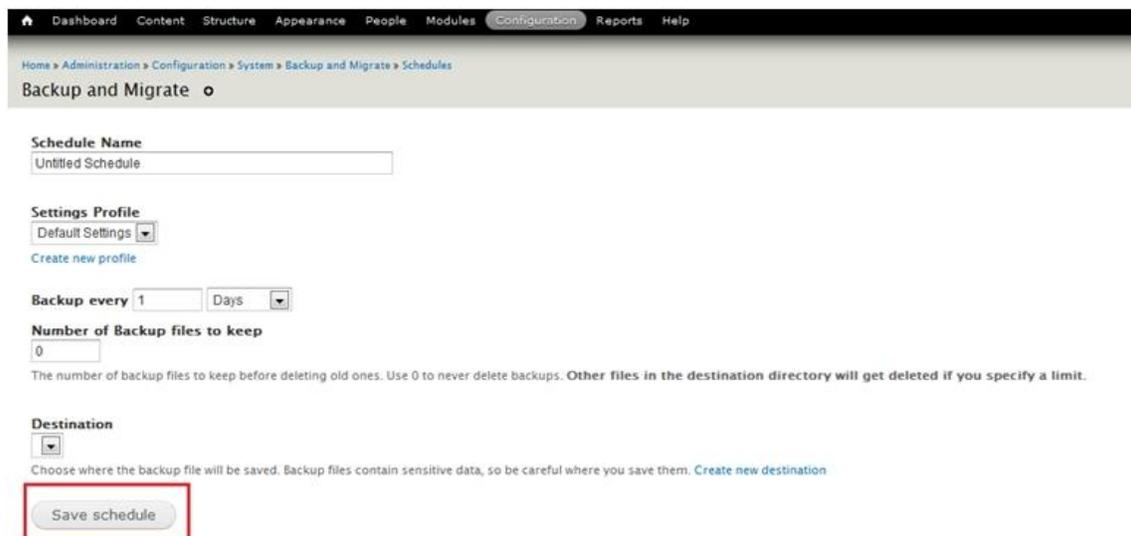

Step 3: Go to **Admin > Configuration > Backup and migrate > Schedules** to create **Schedule**

Step 4: Create a new schedule, using the **Profiles** and **Destination** that you have created above.

Then click on **Save schedule**. Now you have a periodic backup schedule for your site.

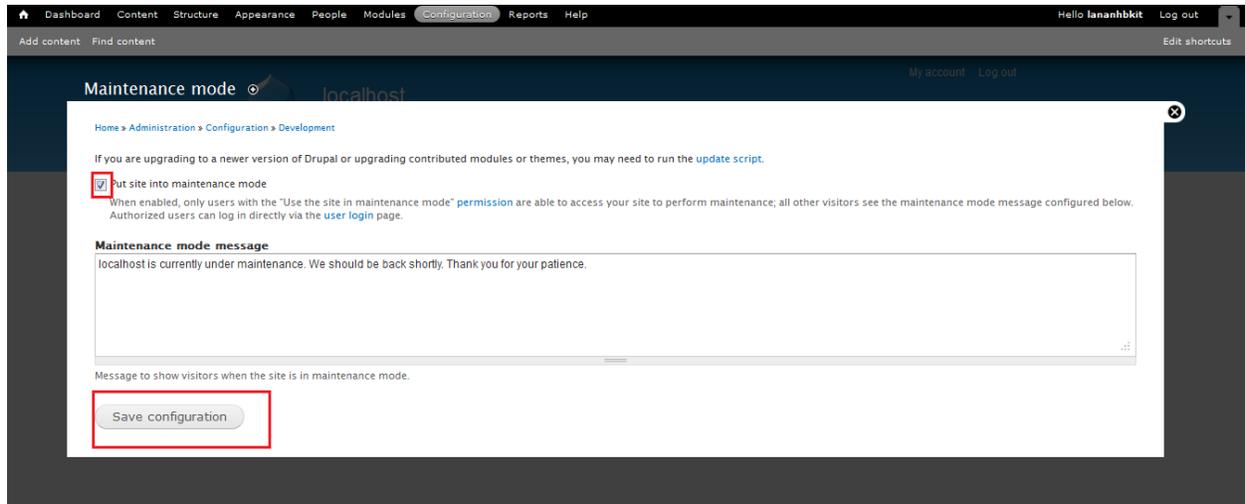

MAINTENANCE MODE

Before you are updating your Drupal site, you should put it into **Maintenance Mode** so that no problems occur for you or visitors. Here is how to turn on Maintenance Mode in Drupal 7:

Step 1: Go to **Admin > Configuration > Maintenance mode**

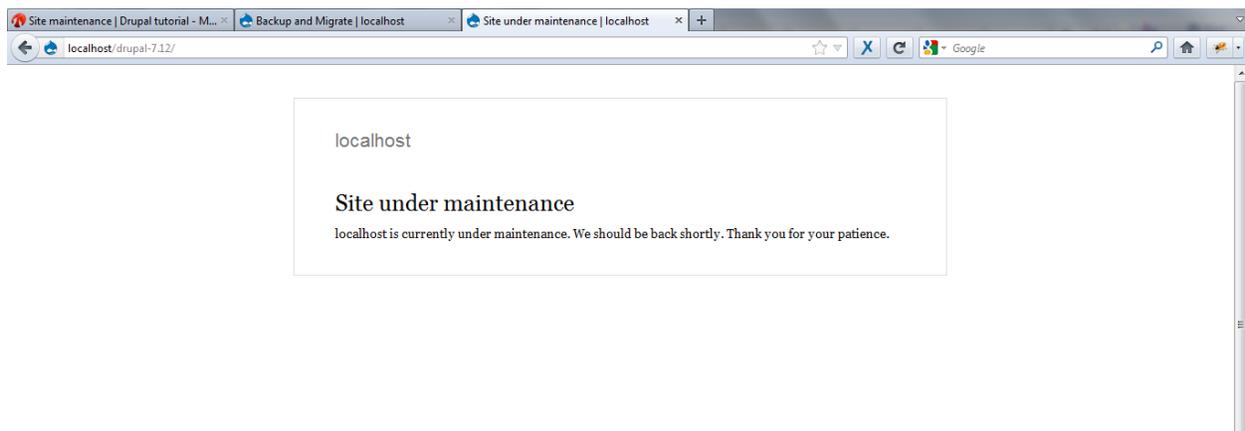

Step 2: Make sure the "**Put site into maintenance mode**" box is checked

Enter the message you want visitors to see during the interruption then click on "**Save configuration**".

Step 3: You'll now see a message saying "*The configuration options have been saved*".

Step 4: You will be able to browse around your site without problems but visitors will see a blank site with the message below.

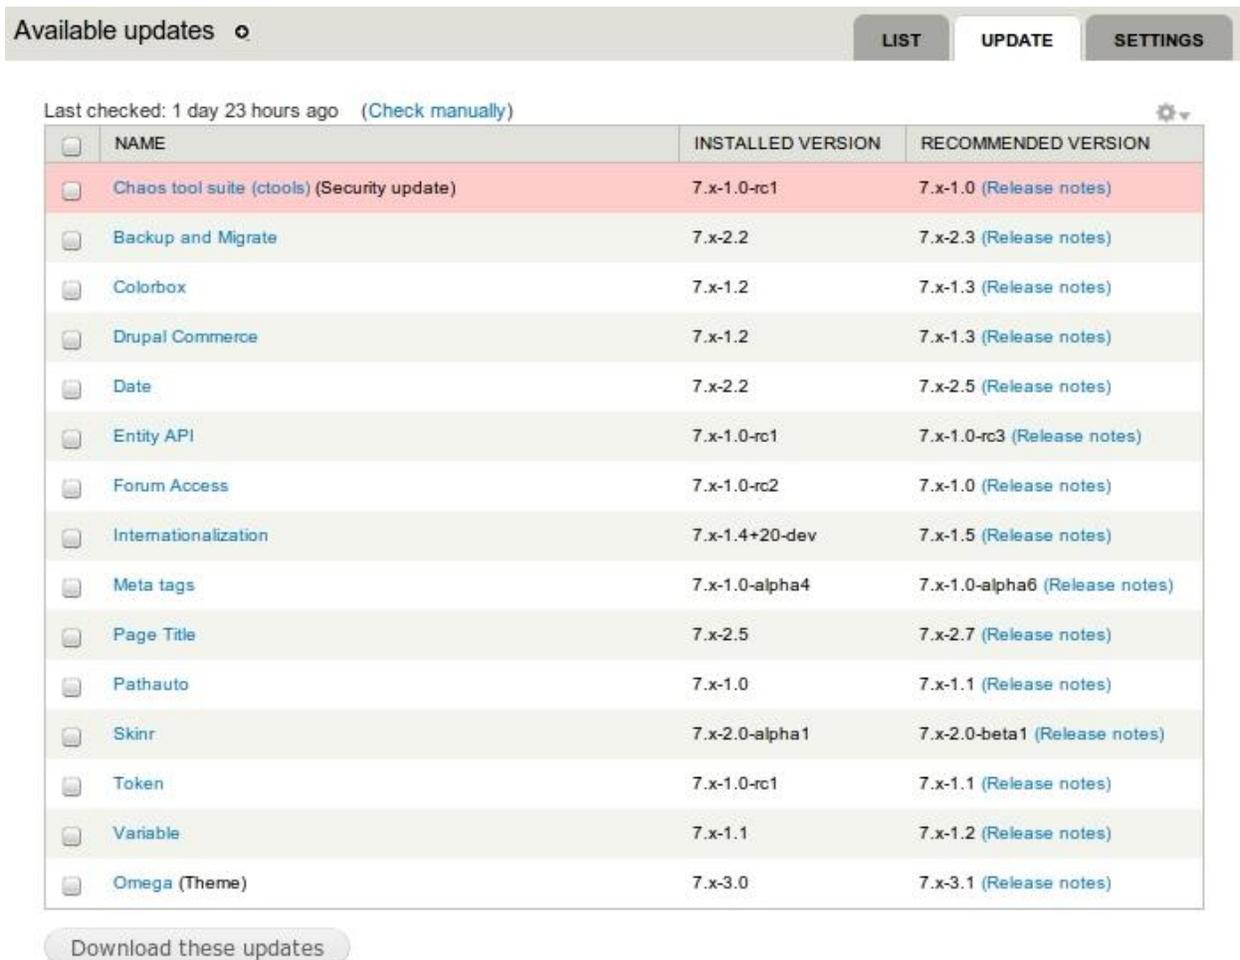

Note: If you log yourself and can't get back in, just add **/?q=user** after your site address and you'll be back to the user login page.

UPDATE MODULES

Since Drupal 7, module updating is very convenient. Unlike Drupal 6 when you have to manually download each module, unzip and upload to your hosting, now you can do it just by a few clicks.

Step 1: Please go to **Admin - Reports - Available updates**, and click to the tab **Update**.

Available updates ⊙ LIST UPDATE SETTINGS

[Download these updates](#)

Step 2: Check all modules you want to update, and click on the button **Download these updates**, a status bar will appear.

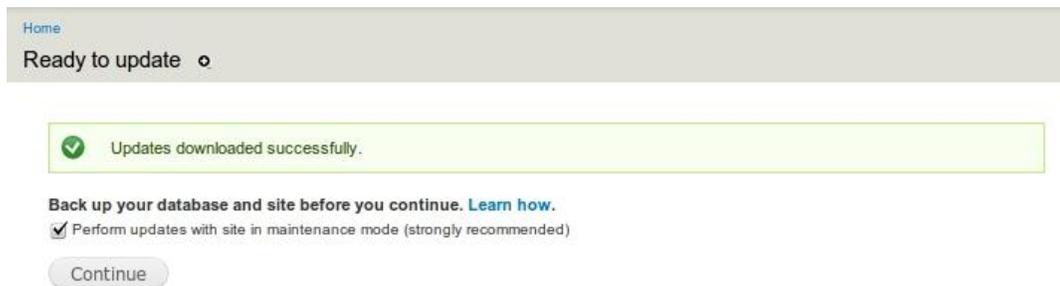

Home

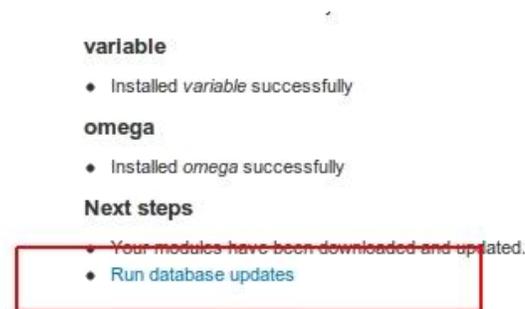

Downloading updates ⊙

Completed 2 of 15. 13%

Step 3: After updates are downloaded successfully, please click on the **Continue** button.

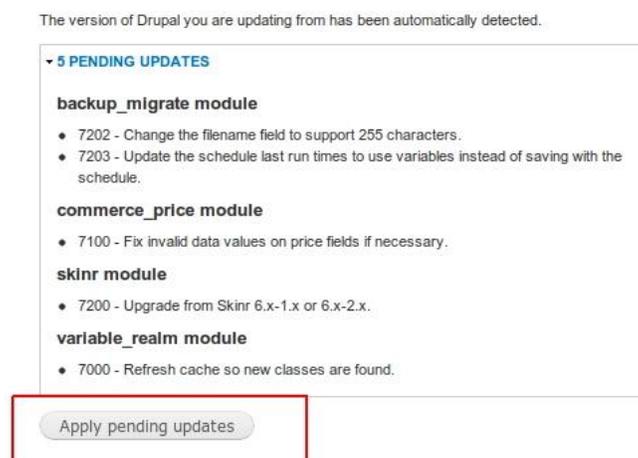

Step 4: The installation process will continue and provide you a report. Scroll down to the bottom and click on **Run database updates**.

You will see a warning of backing up your site and put it in maintenance mode. We have already done these, so just click "**Continue**".

Step 5: Review your updates and click on "**Applying pending updates**"

Step 6: The update script will run and proceed to the result page. If everything is ok, you can now turn on your site and work as usual. All modules are updated.

Drupal database update

- ✓ Verify requirements
- ✓ Overview
- ✓ Review updates
- ✓ Run updates
- ✓ Review log

Updates were attempted. If you see no failures below, you may proceed happily to the [administration pages](#). Otherwise, you may need to update your database manually. All errors have been logged.

- [Front page](#)
- [Administration pages](#)

The following updates returned messages

commerce_price module

Update #7100

- Price fields were cleaned of invalid data values as necessary.

UPDATE DRUPAL CORE

For Drupal core updating, automatic update via admin interface is not supported at the moment. You have to do it manually.

Step 1: Backup your existing site and database.

Step 2: Place the site in "off-line" mode (via **Administer** > **Configuration** > **Maintenance**).

Step 3: Download and unzip the new Drupal core files at <http://drupal.org/project/drupal> and carefully review the information and instructions available in the file UPGRADE.txt (located in the root of your installation directory).

Step 4: Upload the new Drupal files to your hosting, overwrite all Drupal core existing files.

Step 5: Run the **update.php** script, just like updating modules, at **<http://yoursitename.com/update.php>**

If everything works, your Drupal site is now updated to the latest core.

HOUR 6 + 7: ADVANCED CUSTOMIZATION

After finishing **Chapter 2: Basic customization**, your site is good enough to be launched to public. This section presents more advanced customization options. It is not necessary, but if you want to play around with the web looking a little bit, these are some techniques you can use:

- Install/uninstall modules
- Create category for Blog
- Change theme
- Responsive settings
- Add CSS class for block
- Introduction to Views

INSTALL/UNINSTALL DRUPAL MODULES

In our package which you are using with this book, we have installed many essential modules such as Sitemap, URL alias, Image Cache, Newsletter ... They are all contributed modules from the Drupal community.

Drupal.org community has more than 10'000 contributed modules submitted by developers all over the world. If you need to extend and customize Drupal functionalities, almost anytime, you can find a module which suits your needs there. All Drupal contributed modules are hosted at:

<http://drupal.org/project/Modules/>

Install via admin interface

Step 1: Please go to Drupal.org to find your desired modules. For example, let's install the **Simple News** module, available at <http://drupal.org/project/simplenews>. This module enables you to send newsletters to your subscribers.

The [module maintainer](#) is available for paid Simplenews customization and service.

Downloads

Recommended releases

<input type="checkbox"/>	Aggregator	7.8	Aggregates syndicated content (RSS, RDF, and Atom feeds).	
<input checked="" type="checkbox"/>	Block	7.8	Controls the visual building blocks a page is constructed with. Blocks are boxes of content rendered into an area, or region, of a web page.	Help Permissions Configure

Step 3: Enter the archive file link and click on **Install**. If it does not work, please use the second method: browse and upload the archive file, then click on **Install**.

Home » Administration » Modules

Modules ⊕ LIST UPDATE

Installing modules and themes requires **FTP access** to your server. See the [handbook](#) for other installation methods.

You can find [modules](#) and [themes](#) on [drupal.org](#). The following file extensions are supported: `zip tar tgz gz bz2`.

Install from a URL

For example: `http://ftp.drupal.org/files/projects/name.tar.gz`

Or

Upload a module or theme archive to install

No file chosen

For example: `name.tar.gz` from your local computer

Sometimes, both methods are not working because of file permission. Then you have to upload the module folder manually via FTP (using FTP client such as Filezilla) to `/sites/all/modules`.

Step 4: The module is now installed, but not yet enabled. You have to go to **Admin > Modules** to enable it by ticking on the corresponding modules and then hit **“Save Configuration”** button.

MAIL

ENABLED	NAME	VERSION	DESCRIPTION	OPERATIONS
<input checked="" type="checkbox"/>	Simplenews	7.x-1.x-dev	Send newsletters to subscribed email addresses. Requires: Taxonomy (enabled), Options (enabled), Field (enabled), Field SQL storage (enabled) Required by: Simplenews action (enabled)	Help Permissions Configure
<input checked="" type="checkbox"/>	Simplenews action	7.x-1.x-dev	Provide actions for Simplenews. Requires: Simplenews (enabled), Taxonomy (enabled), Options (enabled), Field (enabled), Field SQL storage (enabled), Trigger (enabled)	

Step 5: Now you can use the module. You can click on the “Configure” link beside the module or you can go to Admin > Configuration > Simple News

Uninstall a Drupal module

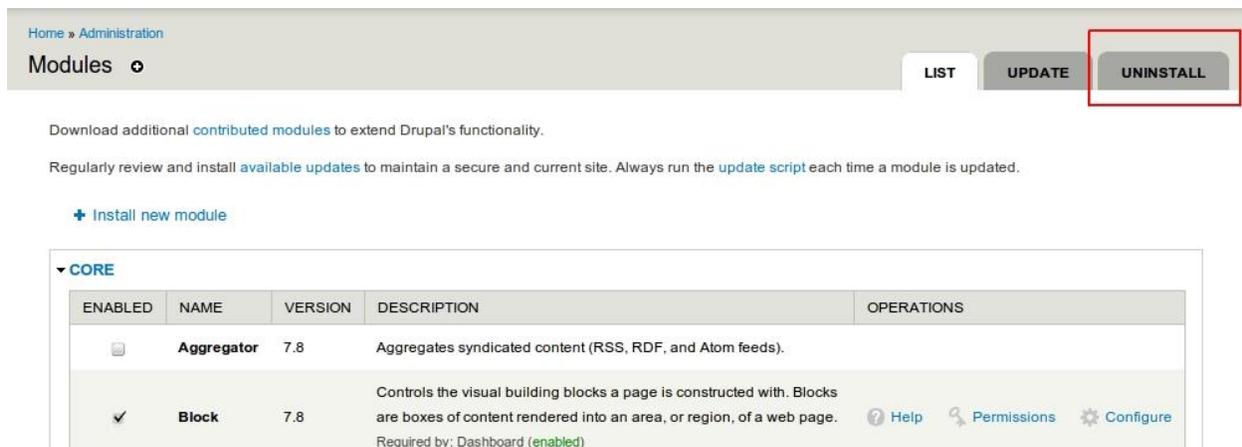

When particular modules are no longer in need, you can uninstall them.

Step 1: Disable module.

You have to go to **Admin > Modules** and untick the modules that you want to uninstall, and then click on Save Configuration.

Step 2: Uninstall module

In Step 1, the module is disabled, but still exists on your website. You can enable them when you need. But if you want to completely remove it, please go to **Admin > Modules** and click on the **“Uninstall”** tab. Then select the modules that you want to remove and click “Uninstall”.

Home » Administration

Modules

LIST UPDATE **UNINSTALL**

Download additional [contributed modules](#) to extend Drupal's functionality.

[+ Install new module](#)

▼ CORE

ENABLED	NAME	VERSION	DESCRIPTION	OPERATIONS
<input type="checkbox"/>	Aggregator	7.8	Aggregates syndicated content (RSS, RDF, and Atom feeds).	
<input checked="" type="checkbox"/>	Block	7.8	Controls the visual building blocks a page is constructed with. Blocks are boxes of content rendered into an area, or region, of a web page. Required by: Dashboard (enabled)	Help Permissions Configure

Then confirm to uninstall and that's all.

Home » Administration » Modules » Uninstall

Confirm uninstall

The following modules will be completely uninstalled from your site, and *all data*

- XML sitemap custom
- XML sitemap engines
- XML sitemap menu
- XML sitemap node
- XML sitemap taxonomy
- XML sitemap user

Would you like to continue with uninstalling the above?

Be careful about the dependancies, ie, module A is required by other modules B and C. In that case, you should disable and uninstall the other dependant modules B and C first, then you can disable and uninstall module A.

CREATE CATEGORY FOR BLOG

If you want to have many categories under your Blog, for example, Technology, Entertainment, Politics, Economy and so on, this section shows you how to do it.

In Drupal, Taxonomy is a method that administrators use to organize website content. You can set up a taxonomy that allows users to add terms (also known as tags or metadata) to content.

Taxonomy is created from 'Vocabularies' that contain related 'Terms'. A vocabulary is a set of terms and terms are just another word for categories. For example:

- "Country" is a **vocabulary**; "US", "Canada", "Germany", "England" and so on are **terms**, belonging to "Country" vocabulary.
- "Music genre" is a **vocabulary**; "Pop", "Rock", "Rap", "R&B" and so on are **terms**, belonging to "Music genere" vocabulary.

If you want to understand the basic concepts of taxonomy, I have written a blog article "[Taxonomy Drupal tutorial - Basic concepts](#)" on this issue.

Now we want to make some categories for Blog entry, so:

- Technology, Entertainment, Policitcs and Economy are **terms**.
- Those terms are all blog categories. Therefore, the **vocabulary** here is "Blog category".
- The making of "Blog category" and its children Technology, Entertainment and so on is called **Taxonomy**.

Is it easier now? We can move on to the next steps, creating vocabularies and terms.

Creating a vocabulary

Step 1: Go to **Admin > Structure > Taxonomy**, and then click on **Add vocabulary** link.

Taxonomy is for categorizing content. Terms are grouped into vocabularies. For example, a vocabulary called "Fruit" would contain the terms "Apple" and "Banana".

[+ Add vocabulary](#)

VOCABULARY NAME	OPERATIONS		
+ Newsletter	edit vocabulary	list terms	add terms
+ Tags	edit vocabulary	list terms	add terms

[Save](#)

Step 2: Choose a name for your vocabulary, for example, **Blog category**.

Step 3: Add a description and click **Save** button.

Home > Administration > Structure > Taxonomy

Taxonomy

Name *

Description

[Save](#)

Creating Terms

After creating a Blog category vocabulary, you will now need to define categories like Technology, Sport or Politics. These are called terms.

Step 1: Please go to **Admin > Structure > Taxonomy**, then click on the **Add terms** link beside the corresponding vocabulary.

Taxonomy is for categorizing content. Terms are grouped into vocabularies. For example, a vocabulary called "Fruit" would contain the terms "Apple" and "Banana".

[+ Add vocabulary](#)

VOCABULARY NAME	OPERATIONS		
+ Newsletter	edit vocabulary	list terms	add terms
+ Tags	edit vocabulary	list terms	add terms
+ Test1	edit vocabulary	list terms	add terms

[Save](#)

Step 2: Enter details for the new term

Name *

Description

Text format

- Web page addresses and e-mail addresses turn into links automatically.
- Allowed HTML tags: <a> <cite> <blockquote> <code> <dt> <dd>
- Lines and paragraphs break automatically.

RELATIONS

Parent terms

Weight *

Terms are displayed in ascending order by weight.

URL PATH SETTINGS (AUTOMATIC ALIAS)

Automatic alias

An alias will be generated for you. If you wish to create your own alias below, uncheck this option. To control the format of the generated aliases, see the [URL alias patterns](#).

URL alias

Optionally specify an alternative URL by which this term can be accessed. Use a relative path and don't add a trailing slash or the URL alias won't work.

[Save](#)

1. Assign your term a name.
2. Choosing the term's "parent", if this term is a sub of another term.
3. Select term to be related (you can select multiple terms by using the standard conventions of your operating system, like shift-click and control-click).
4. List synonyms for your term.

5. Add weight for term.
6. Finally click on **Save**.

To view or manage the terms of each vocabulary, click on its list terms link. On the list terms page you can edit each term by clicking the edit link.

CHANGE THEME COLOR

Our theme has many options such as text size, font family and color and more. Follow the instruction bellow to customize theme for your Drupal site:

Visit **Admin > Appearance**, then click "**Setting**" next to your theme to go to that theme's configuration page.

ENABLED THEMES

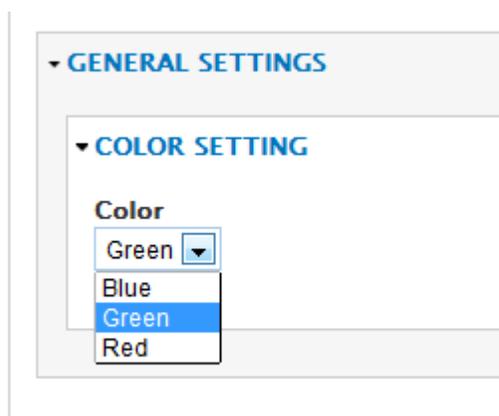

ST alphorn (default theme)

ST alphorn created and design by [SymphonyThemes](#)

[Settings](#)

Then select the color that you want. We have provided several built-in colors with this package.

LAYOUT CONFIGURATION

Sometimes you may want disable responsive, or disable wide screen or reset the width of screens, or disable some of javascript or css file, or change region of the site. You can do it at **Admin > Appearance > Themes**, then click "**Setting**" next to your theme to go to that theme's configuration page.

Responsive Setting

In general, the website support wide screen, normal screen, narrow screen and mobile screen. Sometimes you may want disable responsive, or disable wide screen or reset the width of screens.

- To enable or disable responsive, check to **Enable the responsive** grid to enable or disable responsive.
- To disable wide/normal/narrow screen, At wide/normal/narrow setting, check or uncheck to **Use this layout with the responsive grid** option

WIDE LAYOUT

Use this layout with the responsive grid

INTRODUCTION TO DRUPAL VIEW

View is the heart of displaying content in Drupal. You have your own content like blog posts, photos, products and so on. Now you want to display them, in alphabetic order for example, that is when you need views.

View is the most powerful tool in Drupal, but also not pleasant to manage it at all. I leave views at the very end of this book, because I do not want you to jump into this hard part first and lose all of your enthusiasm right from the beginning. After you have gone through 5 previous chapters, I am sure you are now confident enough to conquer it.

In this tutorial, I present you how to create a Blog page, ie, a list of blog entries. Although it has been implemented in the package you have downloaded, I will show you how to do it by your own.

Blog is where you can post entries. Drupal has a built-in content type called "Article" to support writing blog/news article. An example of a blog page can be found here:

<http://demo.symphonythemes.com/drupal7/shamisen/blog>

Anatomy of the blog page

1. The **blog page** is a list of blog article in a **short format**. Each short format has: a title, post date, image, intro text and the Read more link.
2. The **blog detail page** is the article in **full format** which has the title, post date, image, intro text, body, tags and comment forms.

First, create image presets

Image presets are predefined styles for images. Because your uploading images will be at different size, so if you don't create a common style, they will display as original sizes and your blog page will look messy. When the presets are made, uploaded images will be resized to a single correct size.

Step 1: Go to **Admin > Configuration > Image Styles** (admin/config/media/image-styles), and choose **Add style**

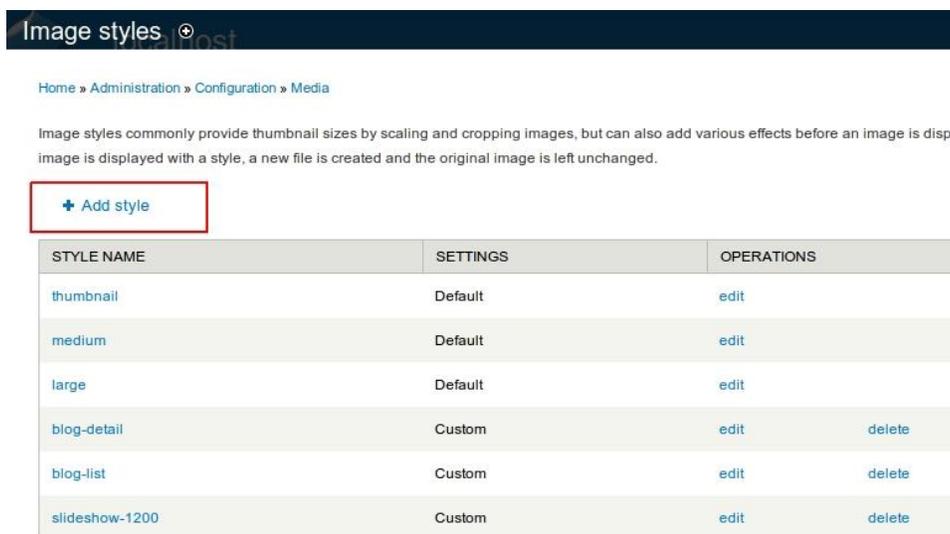

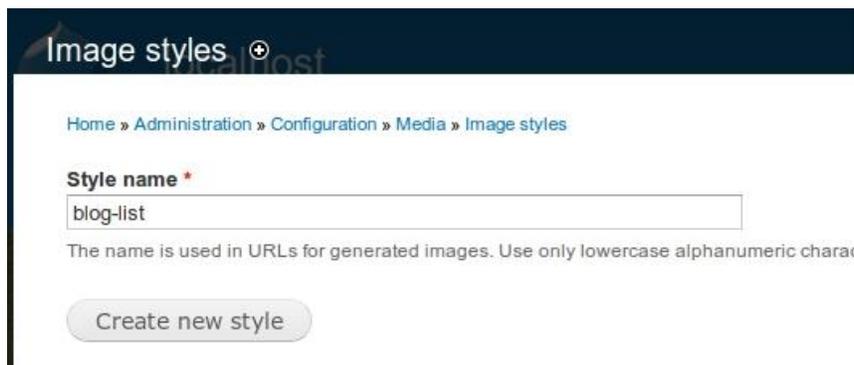

Image styles commonly provide thumbnail sizes by scaling and cropping images, but can also add various effects before an image is displayed. When a new style is created, a new file is created and the original image is left unchanged.

[+ Add style](#)

STYLE NAME	SETTINGS	OPERATIONS
thumbnail	Default	edit
medium	Default	edit
large	Default	edit
blog-detail	Custom	edit delete
blog-list	Custom	edit delete
slideshow-1200	Custom	edit delete

Step 2: Create a **blog-list** style

Home > Administration > Configuration > Media > Image styles

Style name *

blog-list

The name is used in URLs for generated images. Use only lowercase alphanumeric characters and hyphens.

[Create new style](#)

Step 3: On the next page, you will need to create the effect

Image style name *

The name is used in URLs for generated images. Use only lowercase alphanumeric characters, underscores (_), and hyphens (-).

EFFECT	OPERATIONS
There are currently no effects in this style. Add one by selecting an option below.	
<div style="border: 1px solid red; padding: 5px; display: inline-block;"> + <input type="text" value="Scale"/> <input type="button" value="Add"/> </div>	

There are 3 main effects: Scale, Resize and Crop. They are described as the table below

Effects	Description	Example
Scaled to 50%	Keep the aspect ratio	
Resized to 60x20	Exact size, even if distorting the image	
Cropped to 50%x50%, both offsets set to top	Display only a part of the image	

More info on the effects can be found at: <http://drupal.org/node/163561>

Here we want to keep the ratio of the blog images, so we will add a **Scale** effect.

Step 4: Please add a number for the width, **200** for example.

Add Scale effect ⓘ

[Home](#) » [Administration](#) » [Configuration](#) » [Media](#) » [Image styles](#) » [Edit style](#)

Scaling will maintain the aspect-ratio of the original image. If only a single dimension is specified, the other dimension will

Width
 pixels

Height
 pixels

Allow Upscaling
 Let scale make images larger than their original size

You can enter the width only, so all uploaded blog images will scale to a common width of 200 px. The height will change proportionally as the image ratio is kept.

You can also tick on the “Allow Upscaling” option. This option will resize images whose widths are less than 200px. The results will be blur images but your blog will be neat and clean.

Step 5: Click on **Add effect**, go back to the main style window and click on **Update style**.

The “**blog-list**” style has been created. Please follow these above steps to create a second style called “**blog-detail**”. That is the image style for the blog detail page. You can set a wider width, 300 or 400px, it is totally upto you.

Second, create or edit the Article content type

Drupal has a built in content type called “**Article**”. Just go and check if it has enough fields that we want:

Step 1: Go to **Admin > Structure > Content types** (admin/structure/types).

Step 2: You will see all content types available on your site. Please click on the “**manage fields**” of the “Article” content type.

The screenshot shows the 'Content types' administration page in Drupal. The breadcrumb trail is 'Home » Administration » Structure'. There is a link to '+ Add content type'. Below is a table listing content types:

NAME	OPERATIONS
Article (Machine name: article) Use <i>articles</i> for time-sensitive content like news, press releases or blog posts.	edit manage fields manage display delete
Basic page (Machine name: page) Use <i>basic pages</i> for your static content, such as an 'About us' page.	edit manage fields manage display delete
Poll (Machine name: poll) A <i>poll</i> is a question with a set of possible responses. A <i>poll</i> , once created, automatically provides a simple running count of the number of votes received for each response.	edit manage fields manage display
Simplenews newsletter (Machine name: simplenews) A newsletter issue to be sent to subscribed email addresses.	edit manage fields manage display delete

Step 3: Add the **Introtext** field, type: **Long text** and subtype: **Text area** (multiple rows), the click on Save, as the image below

Home » Administration » Structure » Content types » Article

Article

EDIT MANAGE FIELDS MANAGE DISPLAY COMMENT FIELDS COMMENT DISPLAY

[Show row weights](#)

LABEL	NAME	FIELD	WIDGET	OPERATIONS
Title	title	Node module element		
Body	body	Long text and summary	Text area with a summary	edit delete
Tags	field_tags	Term reference	Autocomplete term widget (tagging)	edit delete
Image	field_image	Image	Image	edit delete
URL path settings	path	Path module form elements		

Add new field

Introtext field_introtext Long text Text area (multiple rows)

Label Field name (a-z, 0-9, _) Type of data to store. Form element to edit the data.

Step 4: Here we see that the *Image* field is available by default. But if it does not exist, you can repeat these steps to create the *Image* field.

Step 5: Now we need to add the image style "*blog-detail*" that we have created to this Article content type. So when you view an Article node, the image will display at the predefined size. Please click on the "*Manage Display*" tab.

Home » Administration » Structure » Content types » Article

Article

EDIT MANAGE FIELDS MANAGE DISPLAY COMMENT FIELDS COMMENT DISPLAY

Content items can be displayed using different view modes: Teaser, Full content, Print, RSS, etc. *Teaser* is a short format that is typically used in lists of multiple content items. *Full content* is typically used when the content is displayed on its own page.

Here, you can define which fields are shown and hidden when *Article* content is displayed in each view mode, and define how the fields are displayed in each view mode.

[Show row weights](#)

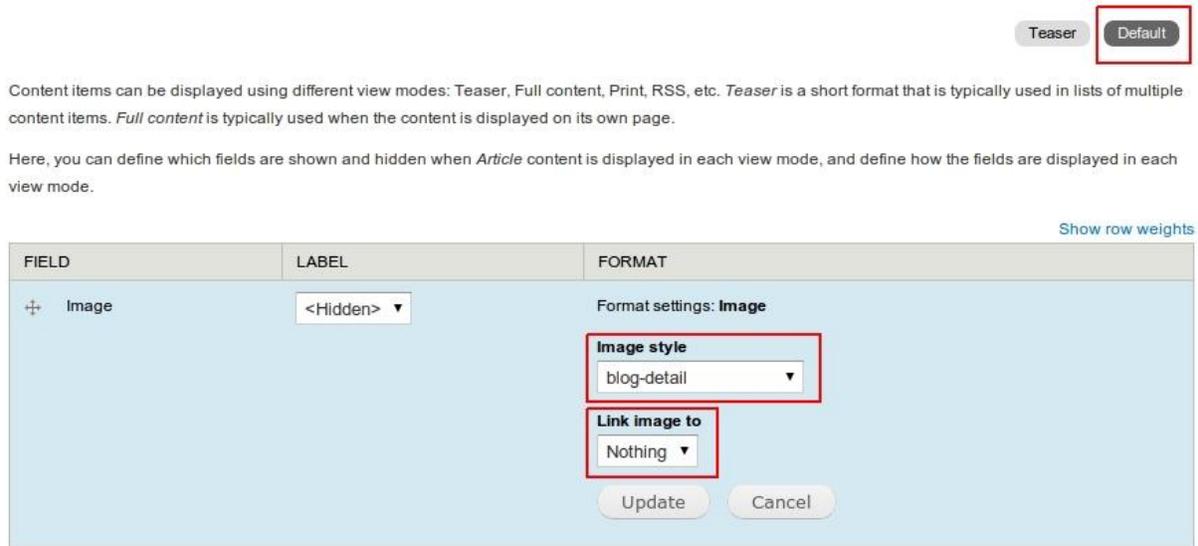

FIELD	LABEL	FORMAT

Introtext	Above	Default	

Hidden

Please pay attention to the two small icons named "*Teaser*" and "*Default*".

- **Teaser:** a short format of the article node, used in lists of multiple content items. We will add the “blog-list” image style here.
- **Default:** full content, when the content is displayed on its own page. We will add the “blog-detail” image style there.

Step 6: We are now at the Default tab, please click on the wheel icon on the very right of the Image field. It will pop down like this:

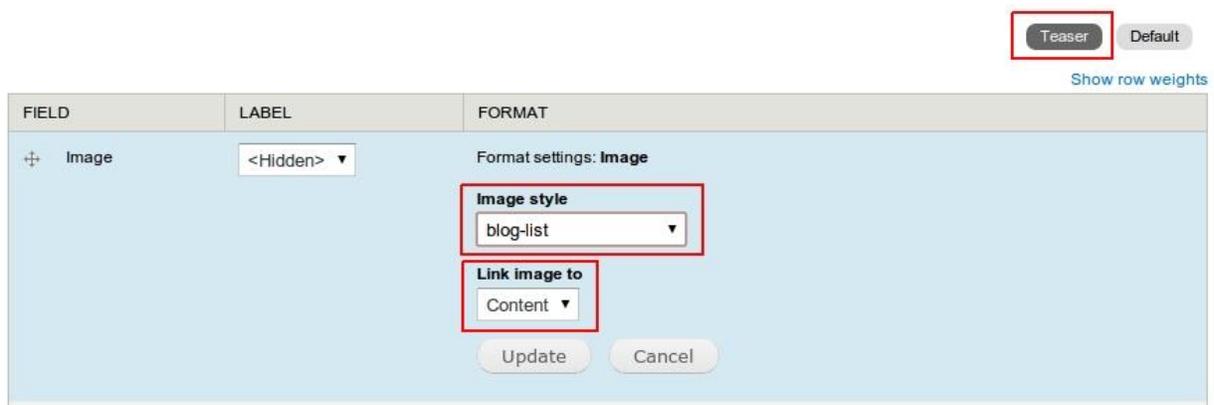

Content items can be displayed using different view modes: Teaser, Full content, Print, RSS, etc. *Teaser* is a short format that is typically used in lists of multiple content items. *Full content* is typically used when the content is displayed on its own page.

Here, you can define which fields are shown and hidden when *Article* content is displayed in each view mode, and define how the fields are displayed in each view mode.

FIELD	LABEL	FORMAT
+ Image	<Hidden>	Format settings: Image Image style blog-detail Link image to Nothing Update Cancel

Then choose Image style as “**blog-detail**” and Link image to “**Nothing**”. Then click **Update**. Then go back to the main **Manage Display** window and click **Save**.

Step 7: Please go to the **Teaser** tab, and apply the “**blog-list**” style for the image. Also select to link the image to “**Content**”. Click on **Update** and then **Save**.

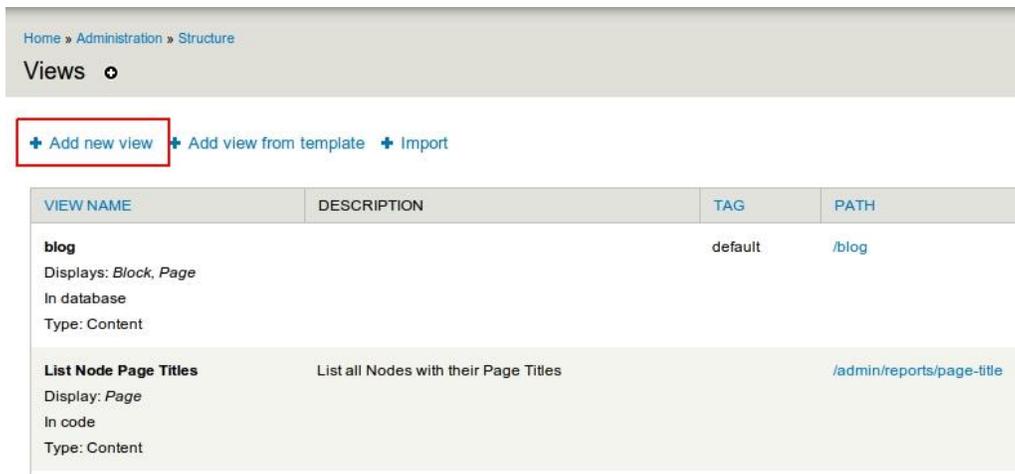

FIELD	LABEL	FORMAT
+ Image	<Hidden>	Format settings: Image Image style blog-list Link image to Content Update Cancel

Third, create the view

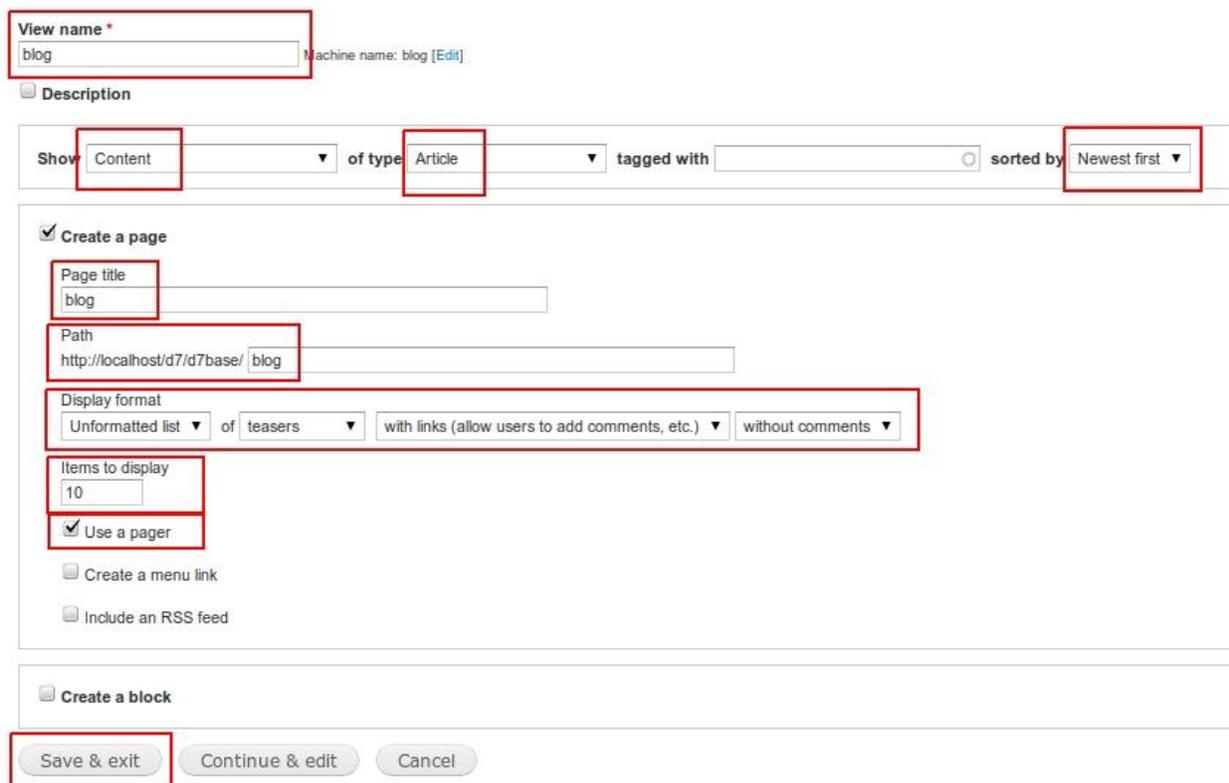

Now we will create a view to display the list of all Article nodes.

Step 1: Go to **Admin > Structure > Views** and choose **Add a new view**

VIEW NAME	DESCRIPTION	TAG	PATH
blog	Displays: <i>Block, Page</i> In database Type: Content	default	/blog
List Node Page Titles	List all Nodes with their Page Titles		/admin/reports/page-title
	Display: <i>Page</i> In code Type: Content		

Step 2: Enter the following information:

View name *
blog Machine name: blog [Edit]

Description

Show: Content of type: Article tagged with sorted by: Newest first

Create a page

Page title: blog

Path: http://localhost/d7/d7base/ /blog

Display format: Unformatted list of teasers with links (allow users to add comments, etc.) without comments

Items to display: 10

Use a pager

Create a menu link

Include an RSS feed

Create a block

Save & exit Continue & edit Cancel

- View name: blog
- Show: Content of type Article, sorted by Newest first

- Tick on Create a page and enter:
- Page title: Blog
- Path: /blog
- Display format: Unformatted list of Teaser with Links without Comments.
- Item to display: 10 (or 5, it is upto you)
- Tick on “Use a pager” so if you have more than 10 blog posts, there will be a pager at the end of the page so you can browse older posts.

Click on **Save** and **Exit**, it will browse you to your new blog page

Step 5: You can always go back and change other settings by going to **Admin > Structure > Views** and click on Edit button of the view you have created.

Step 6: Apply predefined CSS style for this view

The screenshot shows the 'Displays' configuration page for a view named 'Page'. The 'Advanced' tab is selected, and the 'CSS class' field is highlighted with a red box. The 'CSS class' is currently set to 'None'. Other settings visible include:

- TITLE:** Title: blog-list
- FORMAT:** Format: Unformatted list | Settings; Show: Content | Teaser
- PAGE SETTINGS:** Path: /blog-list; Menu: No menu; Access: Permission | View published content
- HEADER:** add
- FOOTER:** add
- PAGER:** Use pager: Full | Paged, 10 items
- CONTEXTUAL FILTERS:** add
- RELATIONSHIPS:** add
- NO RESULTS BEHAVIOR:** add
- EXPOSED FORM:** Exposed form in block: No; Exposed form style: Basic | Settings
- OTHER:** Machine Name: page; Comment: No comment; Use AJAX: No; Hide attachments in summary: No; Use aggregation: No; Query settings: Settings; Field Language: Current user's language; Caching: None; Theme: Information

And enter "**view-list-articles**". It is a predefined CSS style which we have built for this theme package. If it does not work, please try "**view-list-blog**".

The screenshot shows the 'Page: CSS class' dialog box. The 'For' dropdown is set to 'All displays'. The text input field contains 'view-list-articles'. The dialog includes an 'Apply (all displays)' button and a 'Cancel' button.

This tutorial shows you a basic view configuration only. There are a lot of things which we are unable to cover within this book. If you want to enhance your

knowledges with Drupal views, I have listed some resources at the last chapter of this book.

THANK YOU

Congratulation! You have made through 7 hours of this Drupal tutorial. I hope you are much more comfortable with your new Drupal site than you first start. That will much encourage you to learn more about Drupal. There are more difficulties to come, but when you get yourself familiar with it, you will enjoy the power of this great CMS.

What to do next?

If you are a business owner, you can stop here and concentrate on adding more content value to your site which is good for your business. You have learned all basic techniques to manage your site successfully.

- You need more **Drupal themes** for your business site, please go to Symphony Themes [resources](#), we have a lot of themes in various topics: newspaper, ecommerce, travel, organization, business and etc.
- You need to add more advanced features, please seek helps from Drupal developers. The [Drupal community](#) is a great place to ask for helps.

At [Symphony Themes](#), we provide Drupal themes of various categories: shopping, newspaper, organization, photography, business, travel etc ...

If you want to develop yourself as a Drupal developer, this book has given you a good start. You will need to learn a lot more. There are some resources that my developers used to go to:

- **Drupalize.me**: you can find video tutorials for all Drupal subjects here. Drupalize.me is from Lullabot, a wellknown Drupal training company since the first period of Drupal.
- **Packtpub**: Packtpub provides Drupal books and other open source books. It is one of the biggest publishers for open source community.

Feedbacks

When you feel some parts of this book dragged your down, please kindly send me your opinions via info@symphonythemes.com. I appreciate your feedbacks as the main source to make this book more relevant and useful.

If you have problems with the free Drupal themes provided with this book, please raise an issue to our [support forum](#).

Also, please follow the Symphony Themes Twitter at [@symphonythemes](#). We frequently publish new articles about Drupal tutorials and themes.

Copyright

This book is a commercial book. I do appreciate that you do not scan, upload or distribute this book via Internet or via any other means without the permissions from me.

Version

This version was created on August 2012 and it was based on the best experiences and information available at that time. You can check for updates on my website:

- My blog: <http://tuthanh.com/master-drupal-in-7-hours>
- Symphony Themes: <http://www.symphonythemes.com/master-drupal-in-7-hours>

We will continue update this course with more information. We hope to have comments from you.

Thanks for reading and good luck!
